Emperor Palpatine Investigation

In this investigation, we received a laptop hard drive from a search warrant pertaining to the evil Emperor Palpatine. We have received orders from the Jedi that we have fully authority to investigate the drive and report any findings in this report.

Imaging the Hard Drive

FTK Imager

Once the Jedi Order gave me the laptop and authorization, I took a forensic Image of the drive and all the contents on the laptop. The software that I used to create the image was FTK Imager®. Taking a forensic image of the laptop allows the examiner to go through the laptop and all its contents without altering the evidence that they find, making it admissible in court. Doing this can ensure the integrity of the evidence that we find. Below figure 1.0 shows the FTK Imager

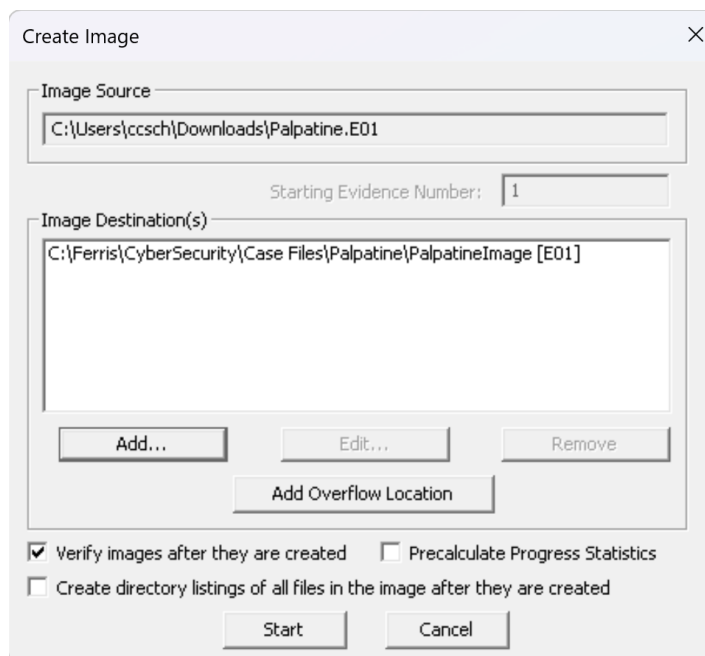

Figure 1.0

Figure 1.1 shows the FTK Imager creating the image of the laptop. The window shows the source for the image, the destination, the status, the progress of the image, and the time took to create the image.

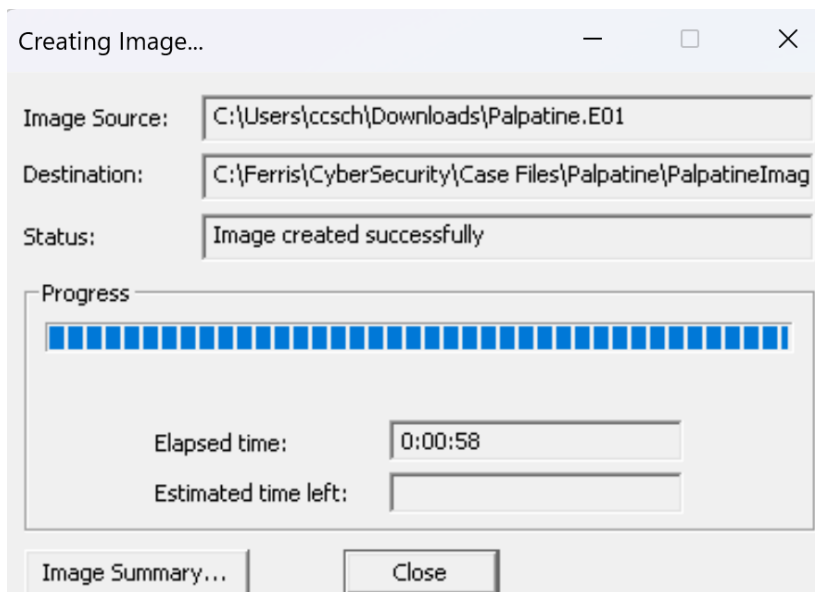

Figure 1.1

After creating the image, the FTK Imager also produces an image summary. The image summary is a text output provided by the software that contains information about the image, including the hash values. Hash values are important because these can verify that the image is an exact copy of the original piece of evidence. Below is the image summary output:

Created By AccessData® FTK® Imager 4.1.1.1

C:\Ferris\CyberSecurity\Case Files\Palpatine\PalpatineImage.E02

Image Verification Results:

Verification started: Tue Dec 9 10:22:40 2025

Verification finished: Tue Dec 9 10:23:10 2025

MD5 checksum: d14337904bf0b9164ecf75ac8d5dc7b1 : verified

SHA1 checksum: 4fca3b7dc0e976b23c5589768feef04592900129 : verified

As stated before, the hash values can prove that the evidence I am working with is unaltered and is the original piece of evidence that was taken from the suspects possession. If anything on the image were changed, the hash values would not have been the same. With the hash values matching In figure 1.2 you can also see the drive and Image verify results.

To further explain the importance of the hash values, “a hash value is a numeric value of a fixed length that uniquely identifies data” (Microsoft, 2025). These values have various combinations

and having the same value is incredibly rare. If anything on the laptop were to change or be modified, the hash value would change. In the summary above and Figure 1.2 below, you can see that they match and are the exact same value. These values matching mean that we can move forward with the investigation. Figure 1.2 shows the drive/image verify results output.

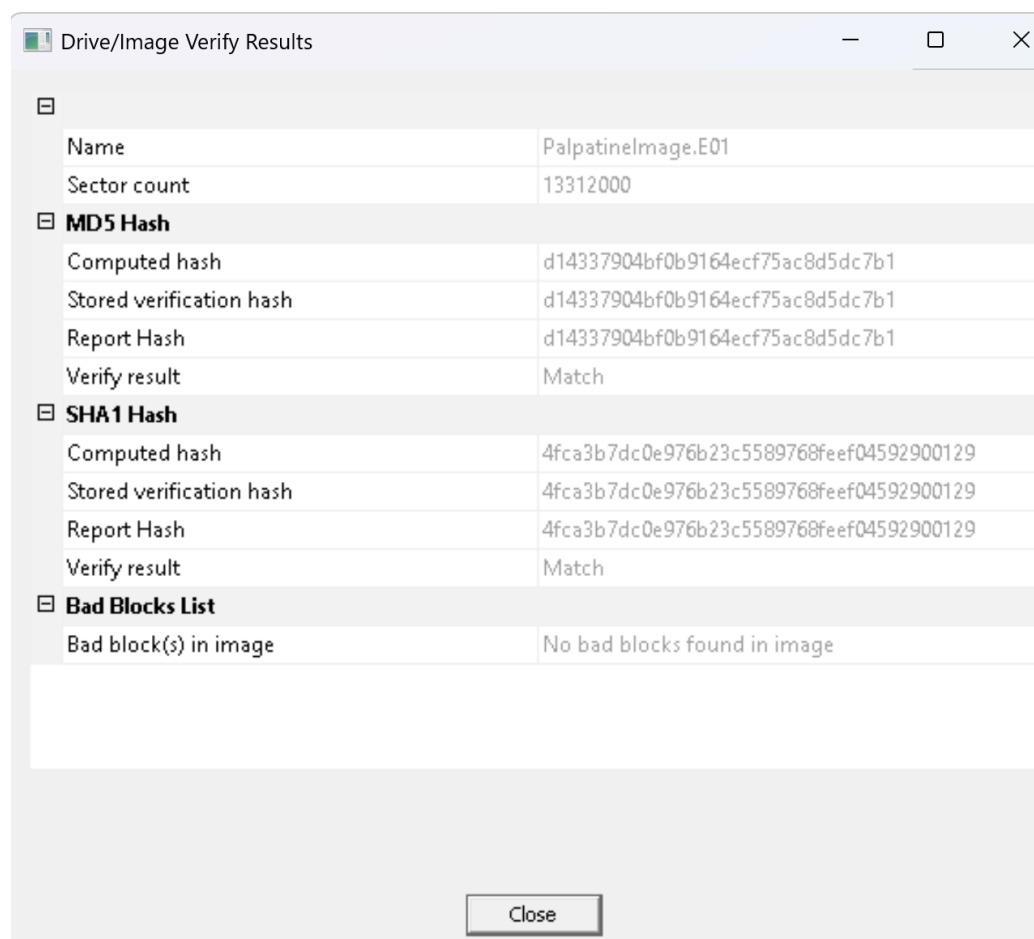

Figure 1.2

Presentation of Evidence

Forensic Explorer

The first software that I used to investigate Palpatine's laptop was the Forensic Explorer® v5.6.8. This software allows me to interact and examine the different registry files on

the laptop. After creating a new case for Palpatine in the software I was able to add the image to the case and start investigating it. Figure 1.3 shows the evidence processor and the tasks selected for this case. Figure 1.4 shows the case set up and the image added as evidence.

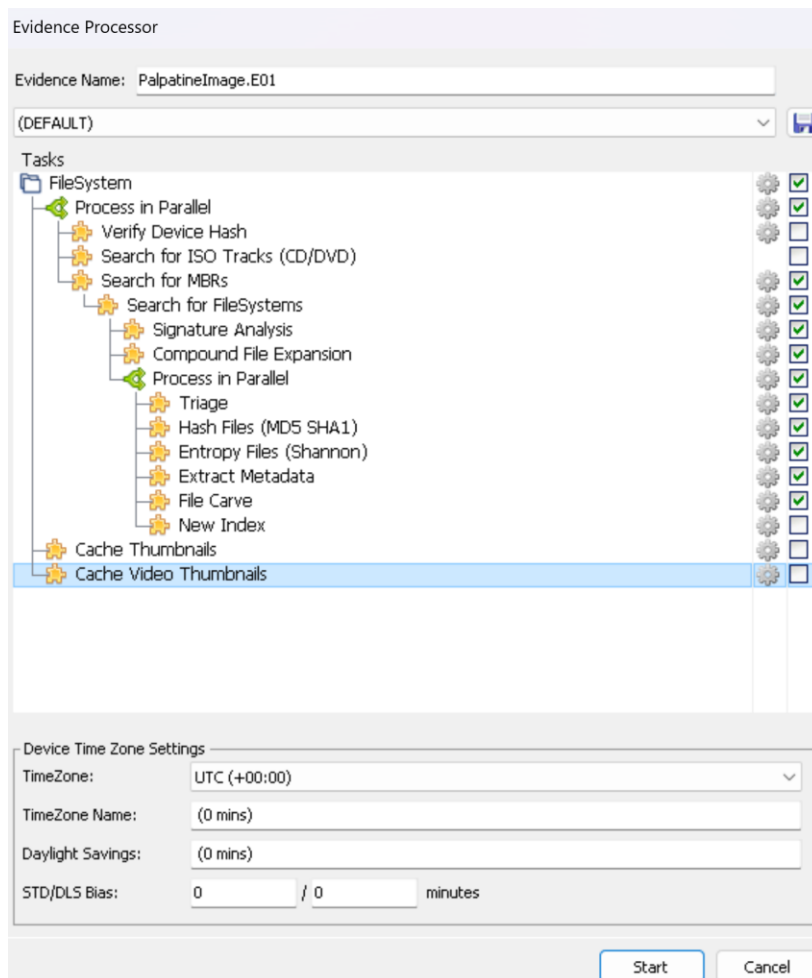

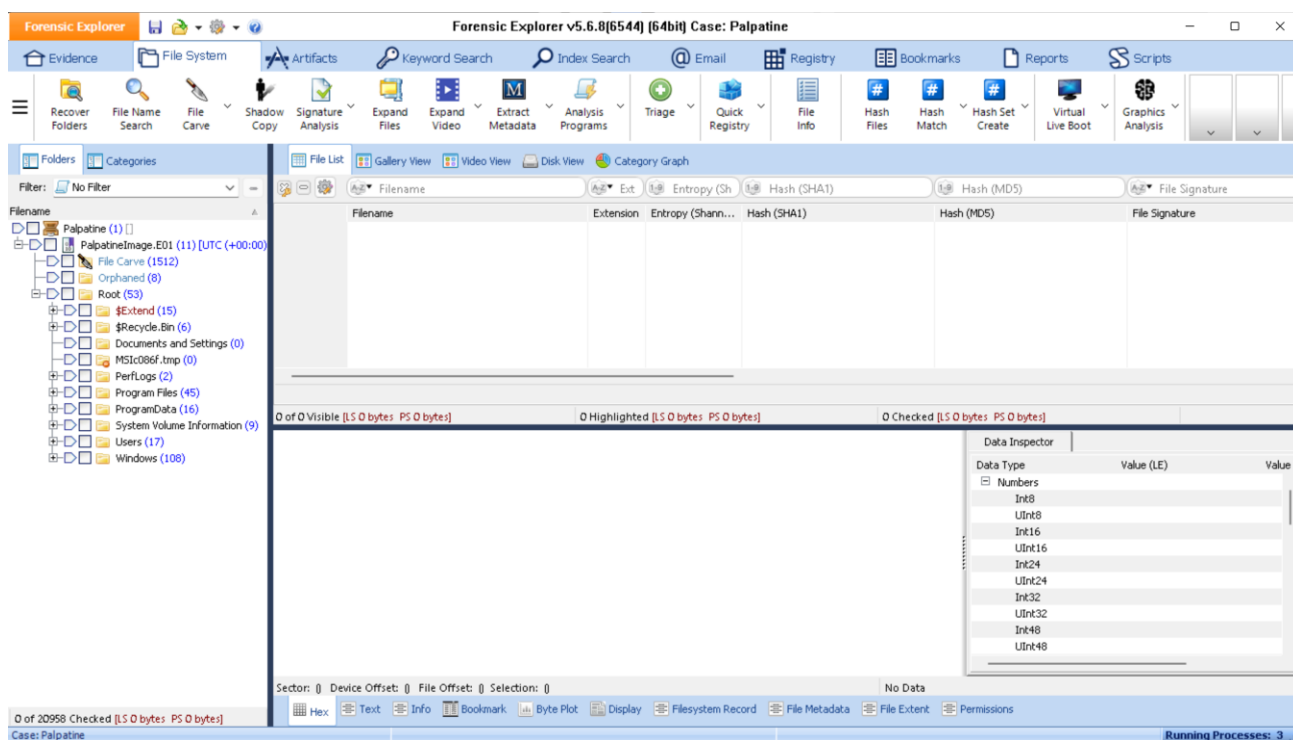

Figure 1.3

*Figure 1.4*

Registry

Within this investigation, there were no registry files on the system that I could find, the Emperor must have hid, deleted, or encrypted the files.

Active File Review

Axiom

The other software that I used to investigate this image was Axiom. Figure 1.5 shows the case details in Axiom for this case. Figure 1.6 shows the evidence sources used to process the case. Figure 1.7 shows that I selected all of the artifacts to display in the case, I did this to better understand the case and examine all of the little details within it.

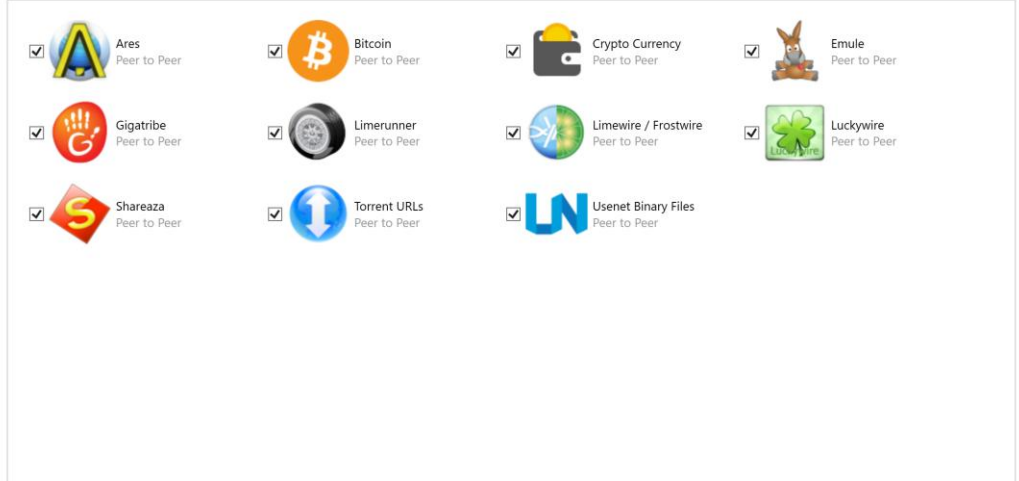

Figure 1.7

Media.***Pictures.***

This image contained many pictures that depict Palpatine of potentially being the sith lord. There are 22 images that I counted as evidence, below is the figures and a description of the picture.

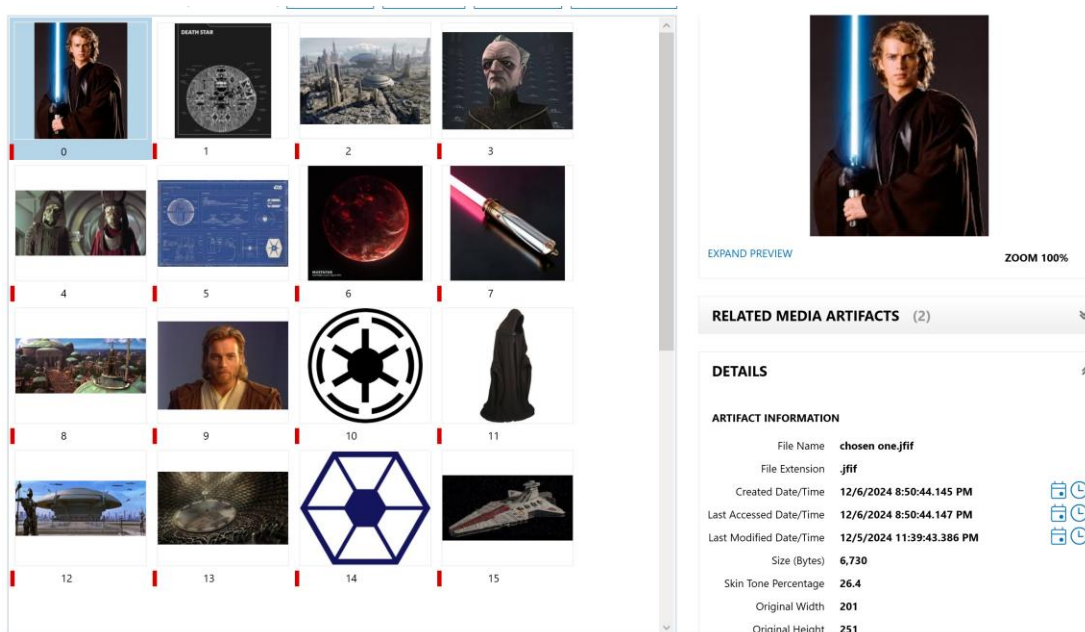

Figure 1.8 – Picture of the Chosen One that Palpatine talks about

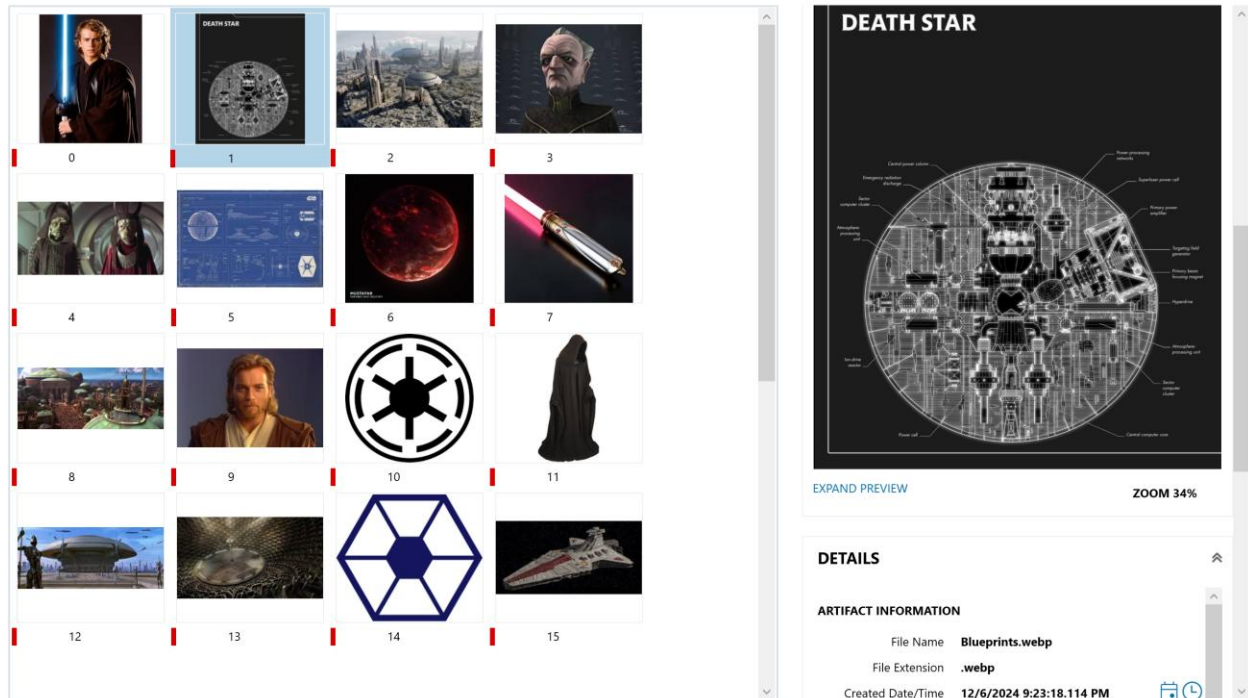

Figure 1.9 – Plans for a massive Space weapon

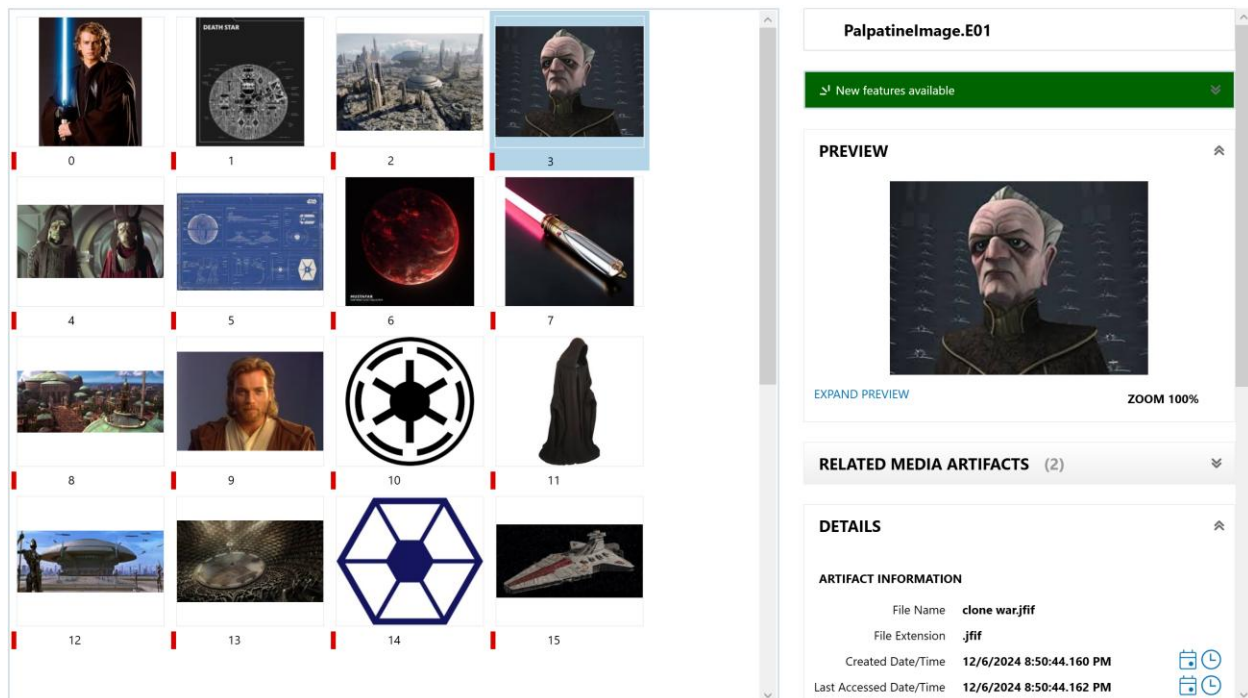

Figure 2.0 – Picture Depicting Palpatine in the Clone Wars

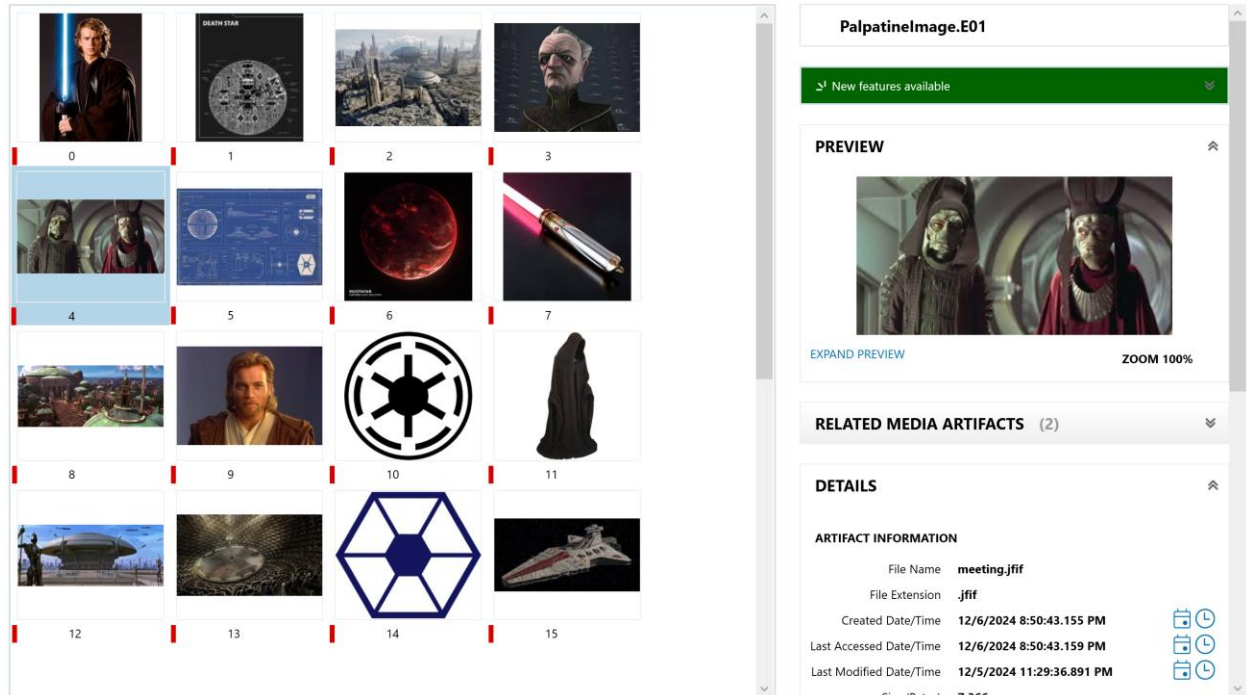

Figure 2.1 – Picture that shows two separatists

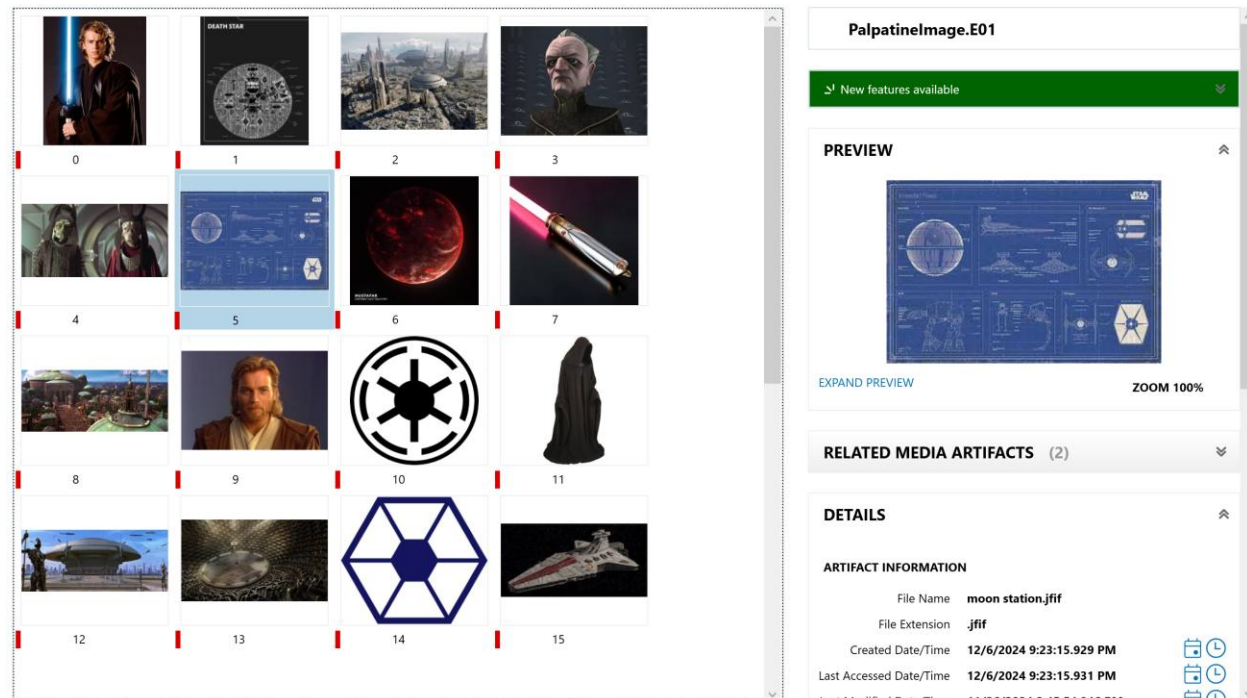

Figure 2.2 – Blueprints for Weapons of War

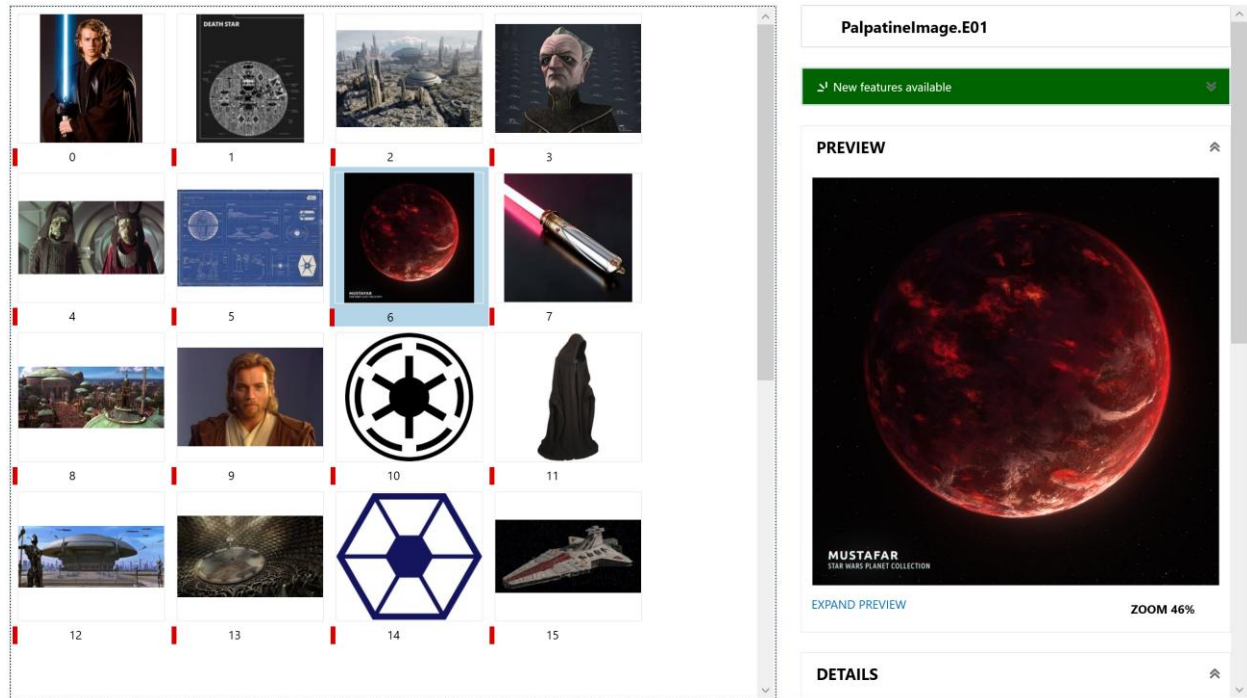

Figure 2.3 – Future base location

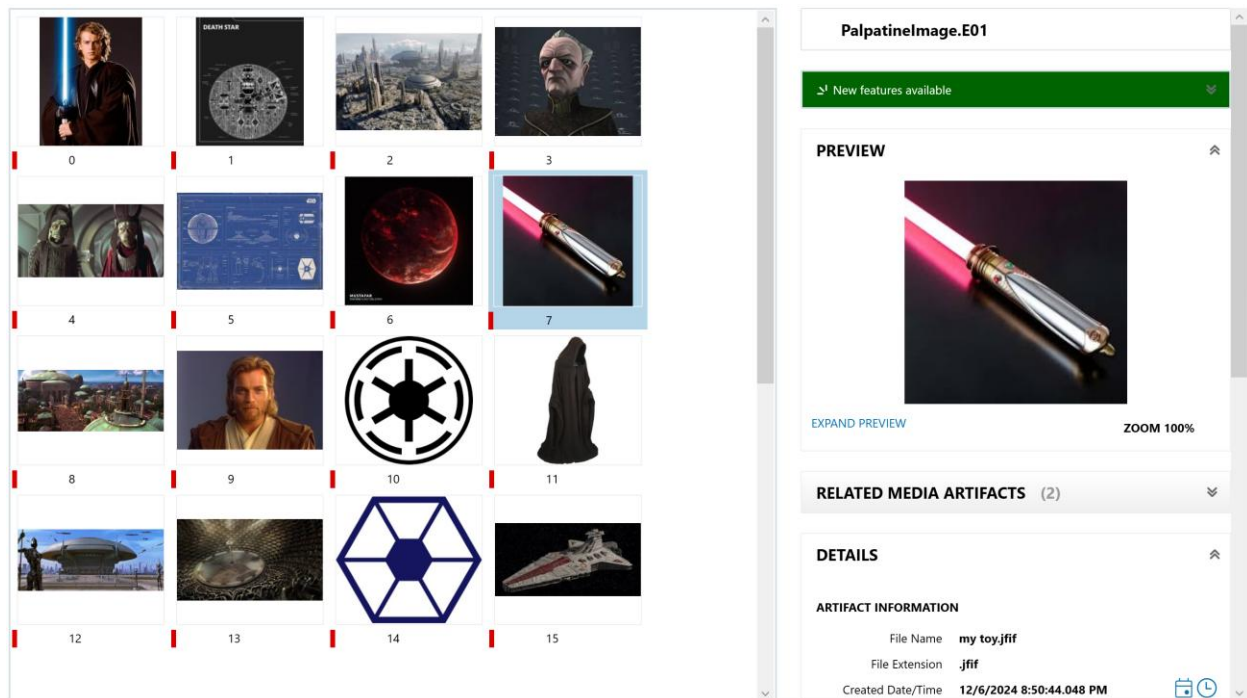

Figure 2.4 – Darth Sidious's Lightsaber, saved as "my toy"

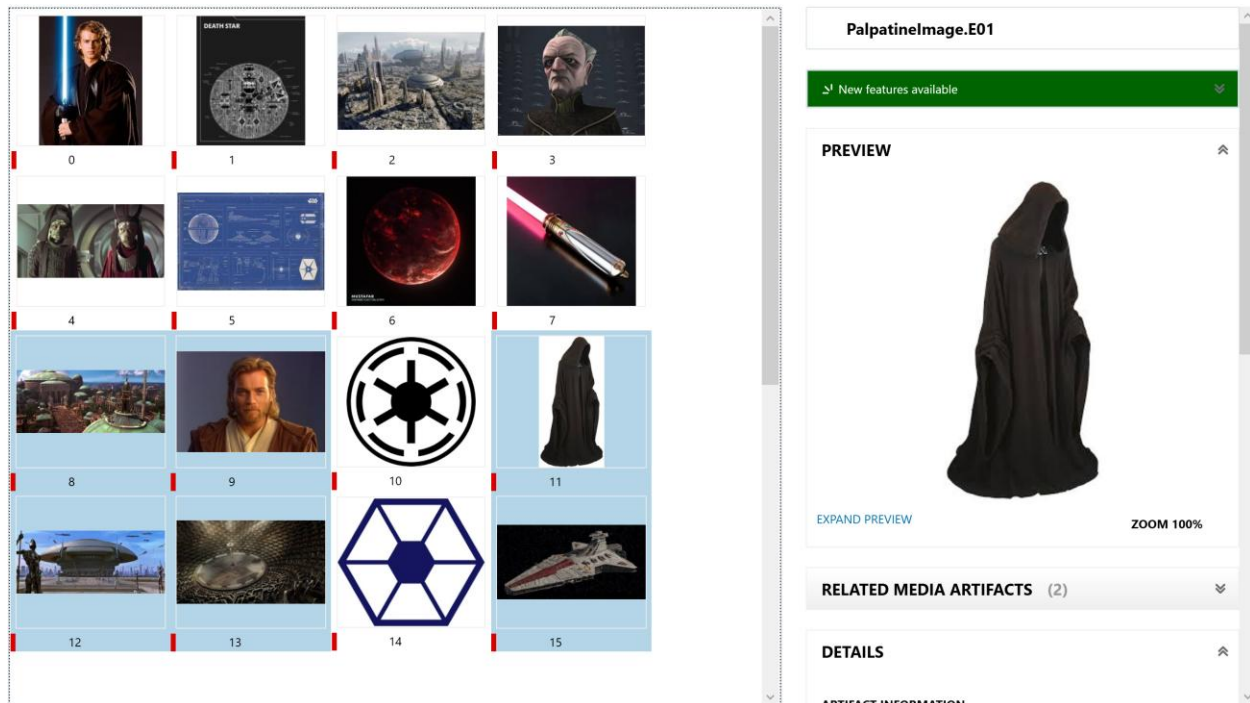

Figure 2.5 – Naboo, Obi-Wan, Sith Robes, Senate Building, Senate Chamber, and A republican Warship

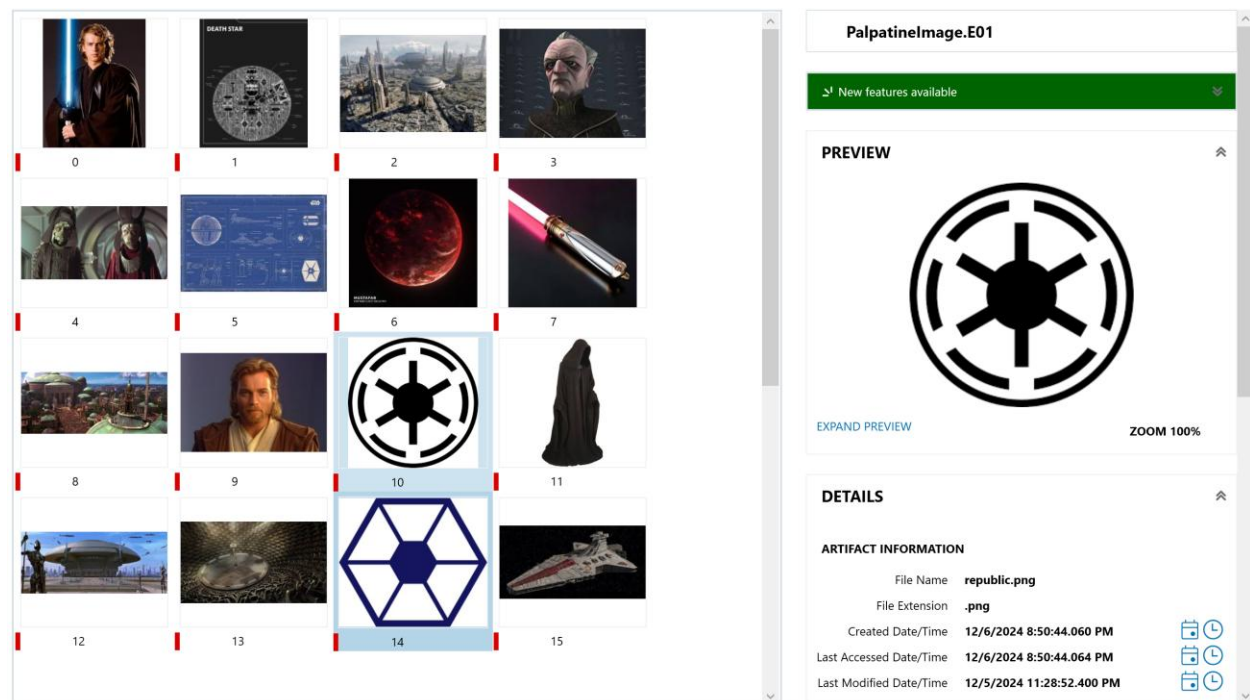

Figure 2.6 – Logo's for both sides of the democracy, Separatists and Republic.

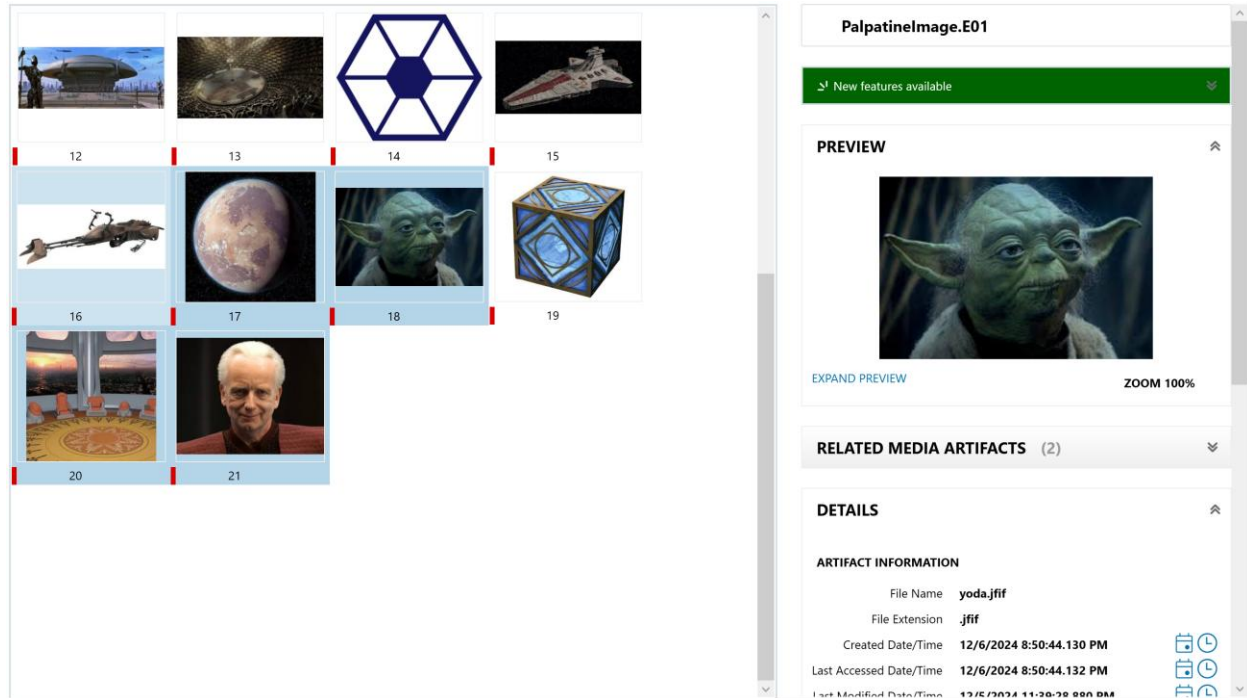

Figure 2.7 – Speeder, Tatooine (Home of Anikin), Yoda, Jedi master’s council, and Senator Palpatine.

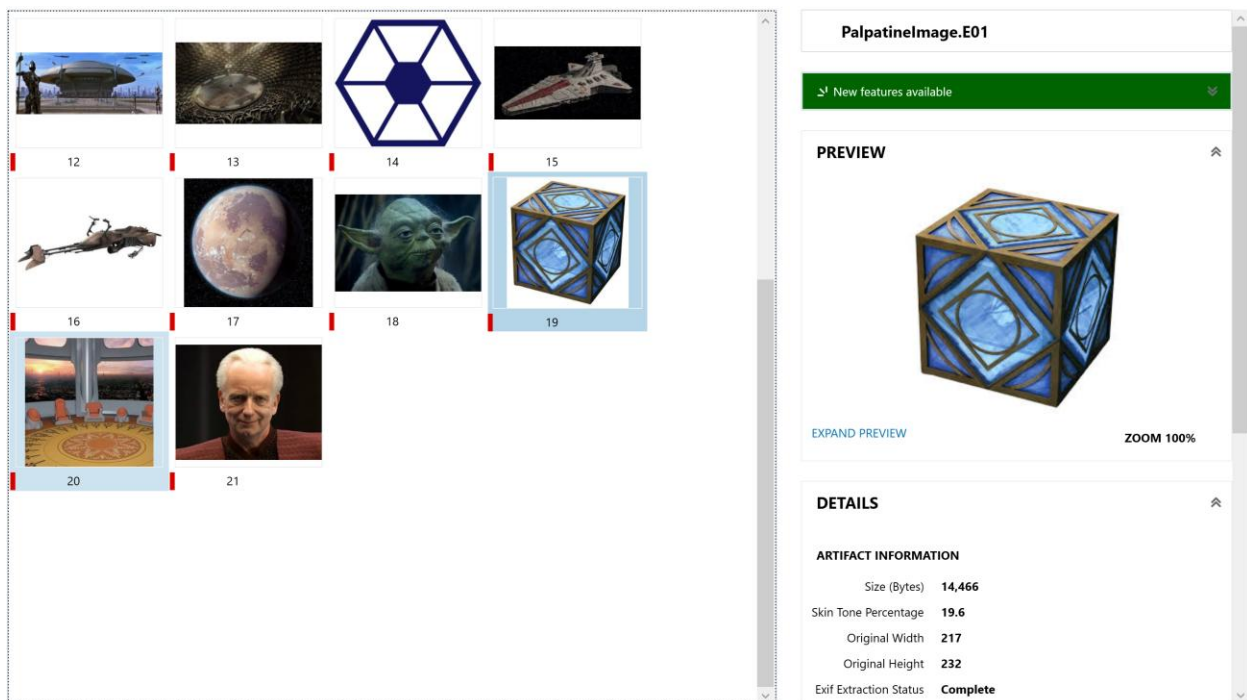

Figure 2.8 – Picture depicts a Horcrux, which is used to find force sensitive children.

Documents.

Within the documents there are multiple incriminating documents. Below is each document with a brief explanation.

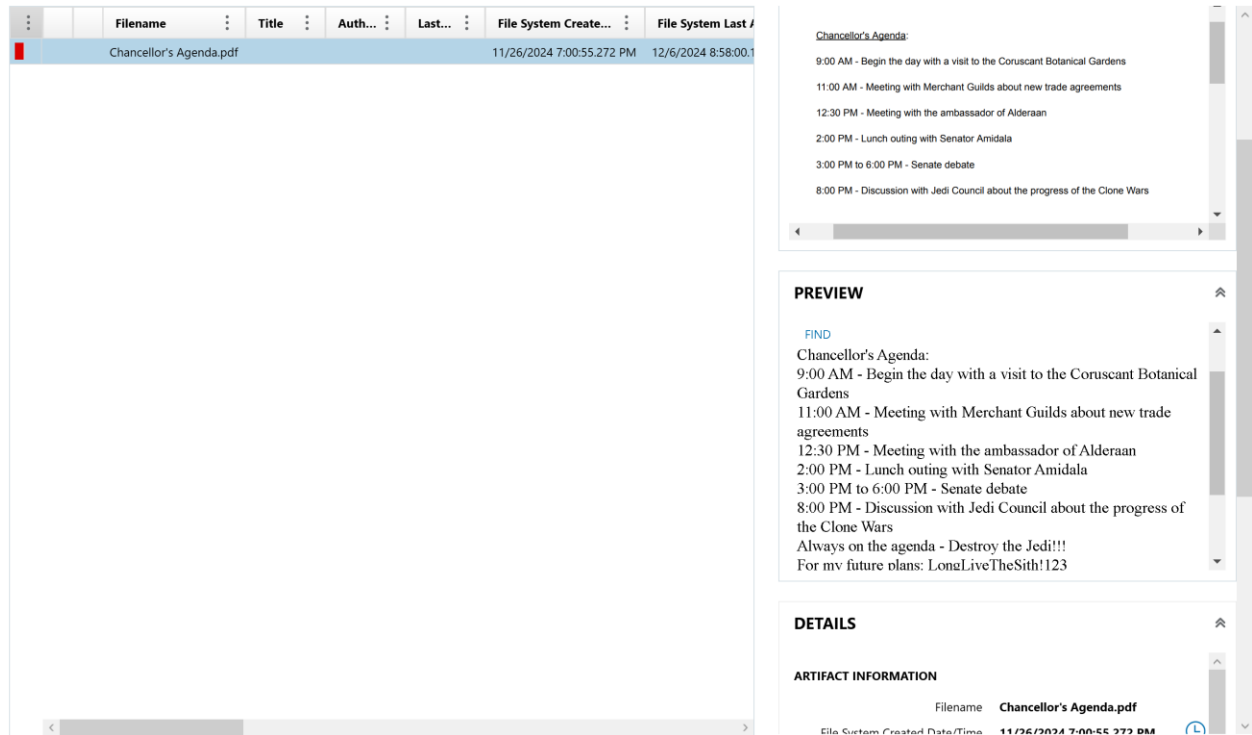

PDF Documents.

Figure 2.9 – Contains the Chancellors Agenda, hidden from the main preview is his secret plan

and the password to his encrypted drive. “Always on the agenda - Destroy the Jedi!!!

For my future plans: LongLiveTheSith!123”.

FIND

[Darth Tyranus] - Master, I have heard news from Kamino that Jango Fett agreed to the deal and the production of a clone army has begun.

[Darth Sidious] - Have the 'modifications' been made?

[Darth Tyranus] - Yes my lord, a biochip will be implanted into each clone to force them to follow any order.

[Darth Sidious] - Splendid!

[Darth Tyranus] - Is there anything further you require of me, master?

[Darth Sidious] - Yes! You will eliminate Jedi Master Sifo-Dyas, he is the only Jedi aware of this army and the only one who could reveal my plans!

[Darth Tyranus] - It will be done.

FIND

[Chancellor Palpatine] - Greetings Anakin, I wanted to express my condolences for the death of your mother.

[Anakin Skywalker] - Hello Chancellor, I appreciate your concern for my wellbeing, it has been difficult.

[Chancellor Palpatine] - It is gravely unfortunate that tragedies such as these are not preventable. Protecting others from death is a power the Jedi could never hope of achieving.

[Anakin Skywalker] - Does such a power exist?

[Chancellor Palpatine] - Come to my office later, I have something to tell you.

FIND

I am in need of a new apprentice. Maul completed his task but was too weak to see the whole picture.

I have found great promise in the former Jedi; Count Dooku. He has the ability to serve my needs.

I will have him raise an alliance of Separatists against the Republic and have him create a secret droid army to incite civil war across the galaxy!!

Encryption

This laptop contained one encrypted drive and I was not able to find the correct application to decrypt it. I tried FTK Imager, VeraCrypt, and Microsoft none of which worked. The password I found was “LongLiveTheSith!123”. The figure below shows the file in axiom

*Figure 5.2*

Conclusion

Throughout this investigation of the Chancellors laptop, I uncovered some secrets about the truth of the Chancellor. Chancellor Palpatine is also known as the Sith Lord Darth Sidious. He is responsible for the death of Qui-Gon Jin and Syfo-Dias. He has connections to Darth Tyrannus and is responsible for turning Count Dooku to the Dark side. The documents reveal his plan to turn Chosen One into his apprentice. This also revealed the meaning of Order 66 and what the true intentions of the Republic Army is for. There are Pictures depicting his plans such as the death star, war machines, and his red lightsaber. He was in charge of Maul and sent him to kill Qui-Gon Jin. We can see his manipulation with Anikin through some of the conversations he has, as his true plan is to turn him away from the Jedi and to the Sith. With the registry files being hidden it is hard to get system and user specifics for this case. However, I believe if I were able to crack the encryption I would have the answers to many more questions. That being said, I was still able to find sufficient evidence to suspect the chancellor of being a Sith Lord, and against the Jedi Order.

Appendix of Terms

Forensic Image – A bit-for-bit copy of a piece of digital evidence.

Hash Value – A unique digital footprint that represents the contents of a drive or file.

Windows Registry – Store configuration settings for the operating system, applications, and hardware.
