Wes Mantooth Investigation

In continuation with our agency's previous investigation of John Washer, I have been tasked with analyzing and reviewing the suspect Wes Mantooth's laptop to find any evidence of criminal activity. Throughout my examination of Wes Mantooth's laptop I used FTK Imager®, Forensic Explorer® v5.6.8, and Axiom® to image and analyze the laptop.

Imaging the Hard Drive

FTK Imager

After obtaining the laptop from the agency, I immediately captured a forensic image of the laptop and all its contents. The software that I used to create the image was FTK Imager®. Taking a forensic image of the laptop allows the examiner to go through the laptop and all its contents without altering the evidence that they find, making it dismissible in court. Doing this can ensure the integrity of the evidence that we find. Below figure 1.0 shows the FTK Imager

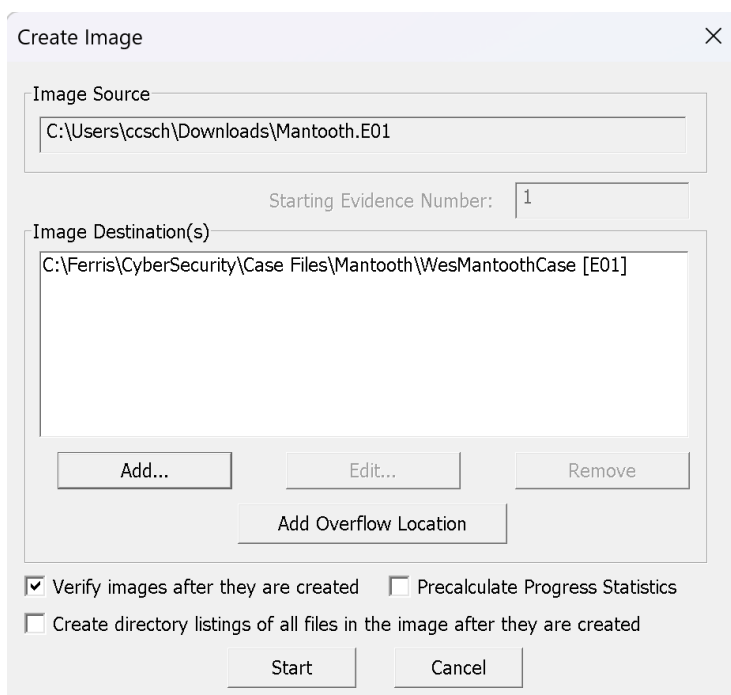

Figure 1.0

Figure 1.1 shows the FTK Imager creating the image of the laptop. The window shows the source for the image, the destination, the status, the progress of the image, and the time took to create the image.

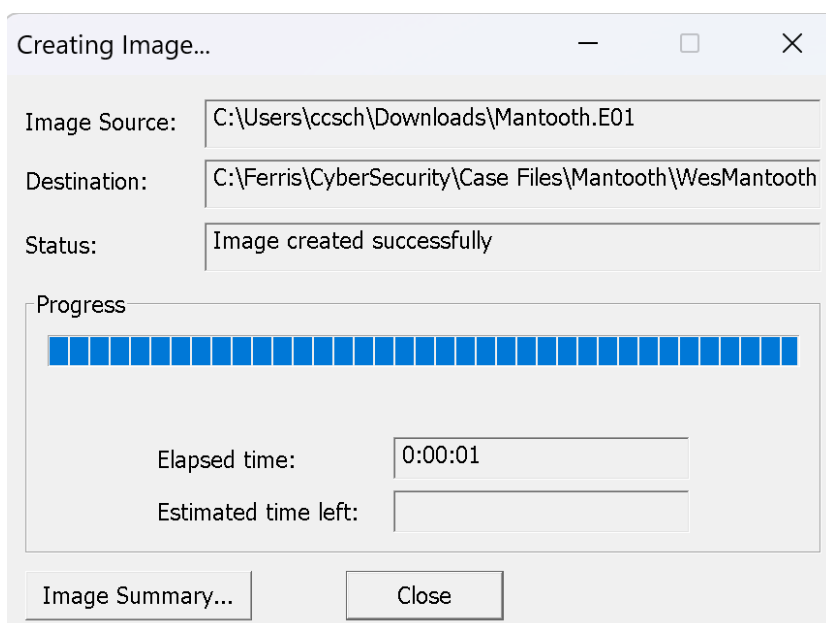

Figure 1.1

After creating the image, the FTK Imager also produces an image summary. The image summary is a text output provided by the software that contains information about the image, including the hash values. Hash values are important because these can verify that the image is an exact copy of the original piece of evidence. Below is the image summary output:

Created By AccessData® FTK® Imager 4.1.1.1

Case Information:

Acquired using: ADI4.1.1.1

Case Number: Wes Mantooth Investigation

Evidence Number: 1

Unique description: Wes Mantooth's Laptop

Examiner: Colton Schmid

Notes: Connected to the John Washer Case

Information for C:\Ferris\CyberSecurity\Case Files\Mantooth\WesMantoothCase:

Physical Evidentiary Item (Source) Information:

[Device Info]

Source Type: Physical

[Verification Hashes]

MD5 verification hash: 31217210a1a69f272079a3bde3d9d8fc

[Drive Geometry]

Bytes per Sector: 512

Sector Count: 250,879

[Image]

Image Type: E01

Examiner:

Notes:

Acquired on OS: Windows XP

Acquired using: FTKI2.5.3.14

Acquire date: 7/2/2008 9:09:34 PM

System date: 7/2/2008 9:09:34 PM

Unique description: untitled

Source data size: 122 MB

Sector count: 250879

[Computed Hashes]

MD5 checksum: 31217210a1a69f272079a3bde3d9d8fc

SHA1 checksum: 12e4ac047e328ca2bd63a4d65df25b3ecba55769

Image Information:

Acquisition started: Mon Oct 13 15:56:29 2025

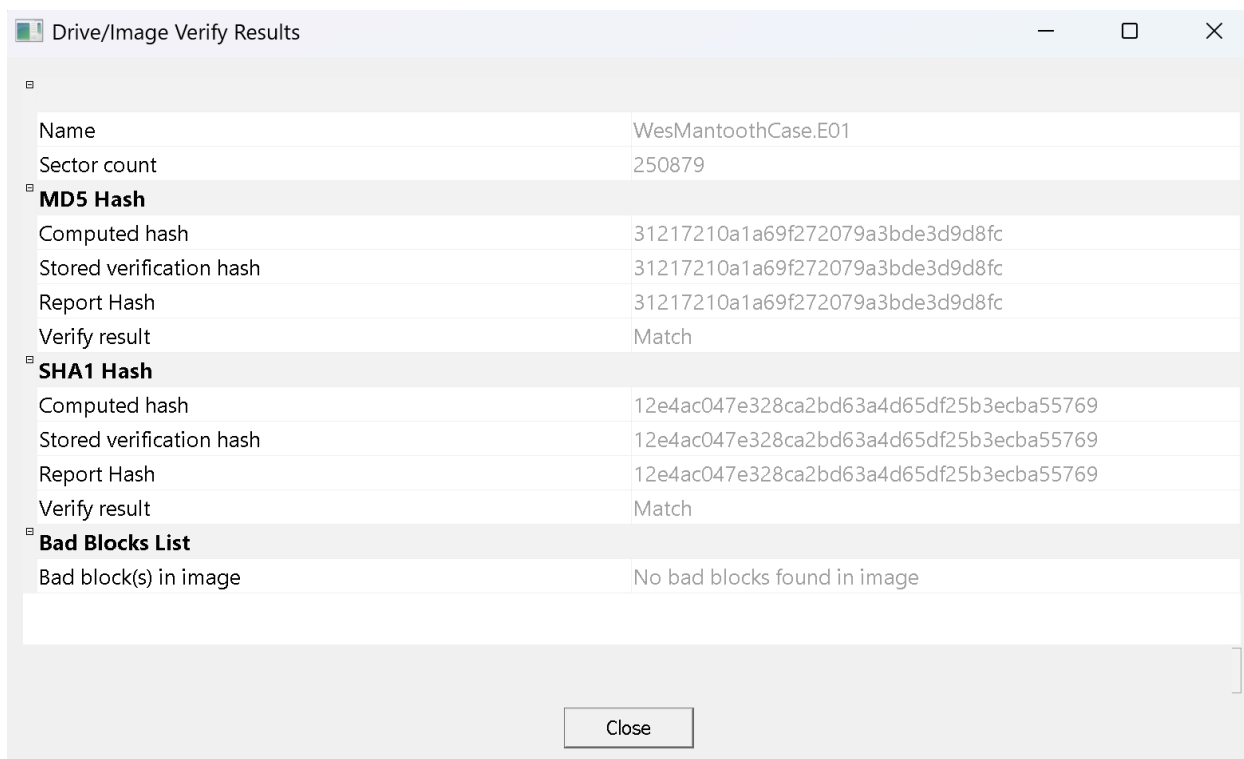

Acquisition finished: Mon Oct 13 15:56:30 2025

Segment list:

C:\Ferris\CyberSecurity\Case Files\Mantooth\WesMantoothCase.E01

As stated before, the hash values can prove that the evidence I am working with is unaltered and is the original piece of evidence that was taken from his possession. If anything on the image were changed, the hash values would not have been the same. With the hash values matching In figure 1.2 you can also see the drive and Image verify results.

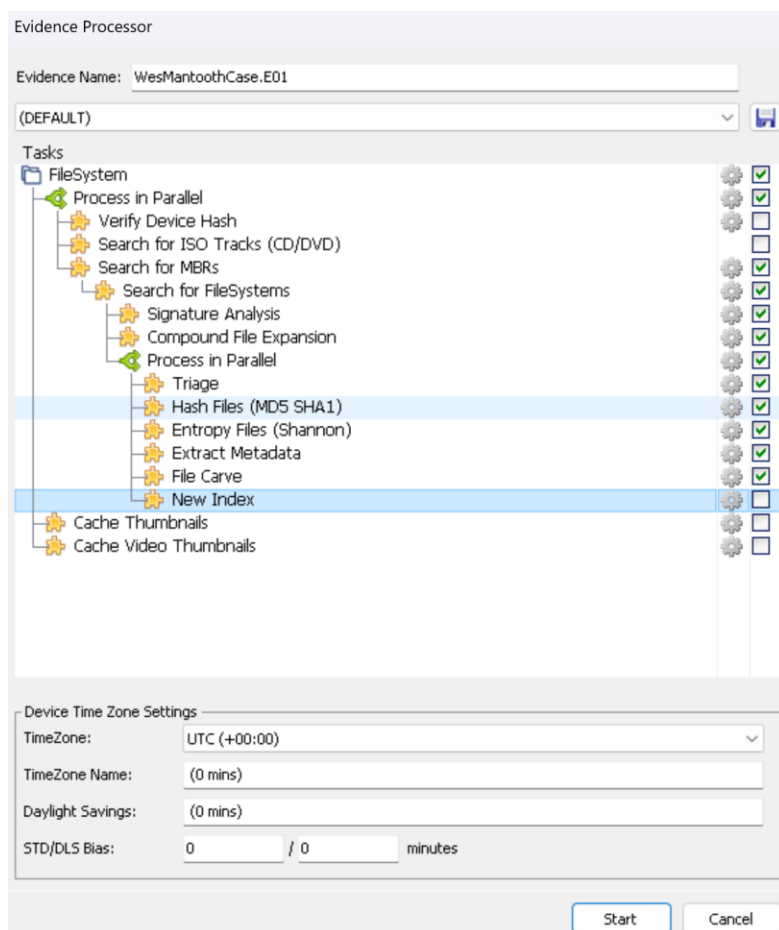

To further explain the importance of the hash values, “a hash value is a numeric value of a fixed length that uniquely identifies data” (Microsoft, 2025). These values have various combinations and having the same value is incredibly rare. If anything on the laptop were to change or be modified, the hash value would change. In the summary above and Figure 1.2 below, you can see that they match and are the exact same value. These values matching mean that we can move forward with the investigation. Figure 1.2 shows the drive/image verify results output.

*Figure 1.2*

Presentation of Evidence

Forensic Explorer

The first software that I used to investigate Wes Mantooth's laptop was the Forensic Explorer® v5.6.8. This software allows me to interact and examine the different registry files on the laptop. After creating a new case for Wes Mantooth in the software I was able to add the image to the case and start investigating it. Figure 1.3 shows the evidence processor and the tasks selected for this case. Figure 1.4 shows the case set up and the image added as evidence.

*Figure 1.3*

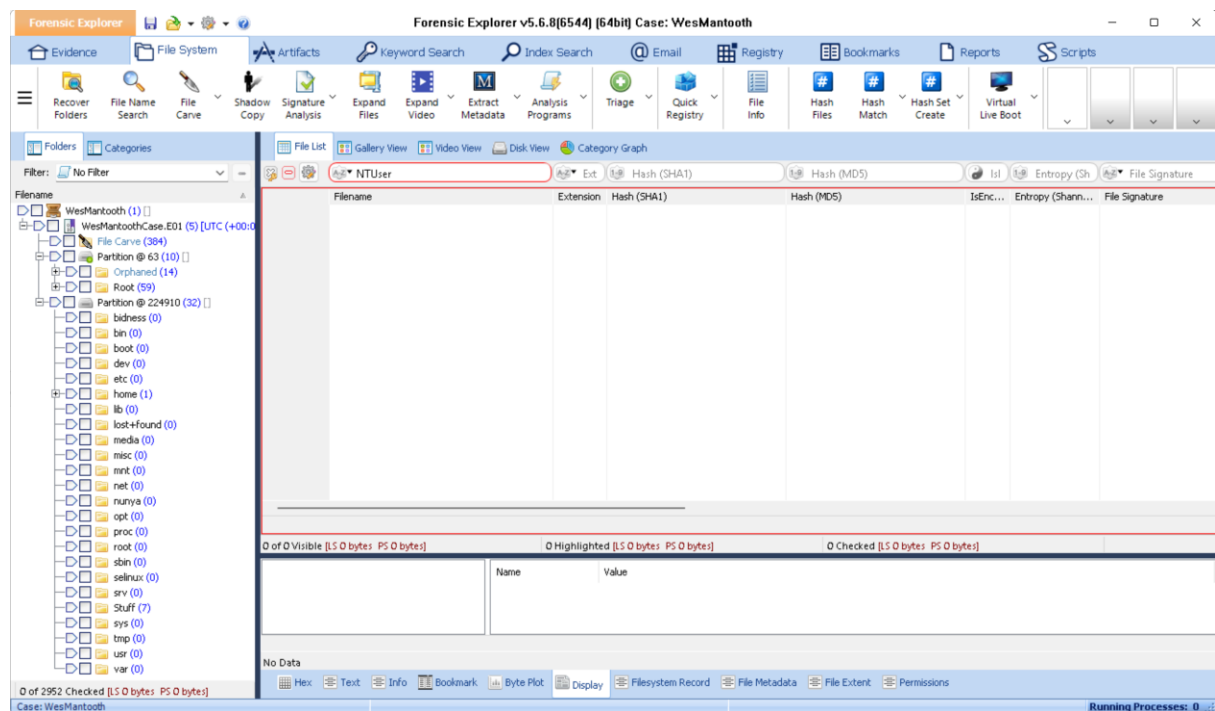

Figure 1.4

Registry

Registry files are exclusively seen in Windows operating systems. These files include "information that Windows continually references during operation, such as profiles for each user, the applications installed on the computer and the types of documents that each can create, property sheet settings for folders and application icons, what hardware exists on the system, and the ports that are being used" (Microsoft, 2025, p. 9). These files may include critical information pertaining to cases. This analysis focused on four registry hives: Security Account Manager (SAM), System, Software, and NTUser.DAT. I moved the System, Software, and SAM registry files from the file system to the registry module. Figure 1.4 shows the SAM, system, and software files that I moved to the registry module. Figure 1.6 shows the exported files.

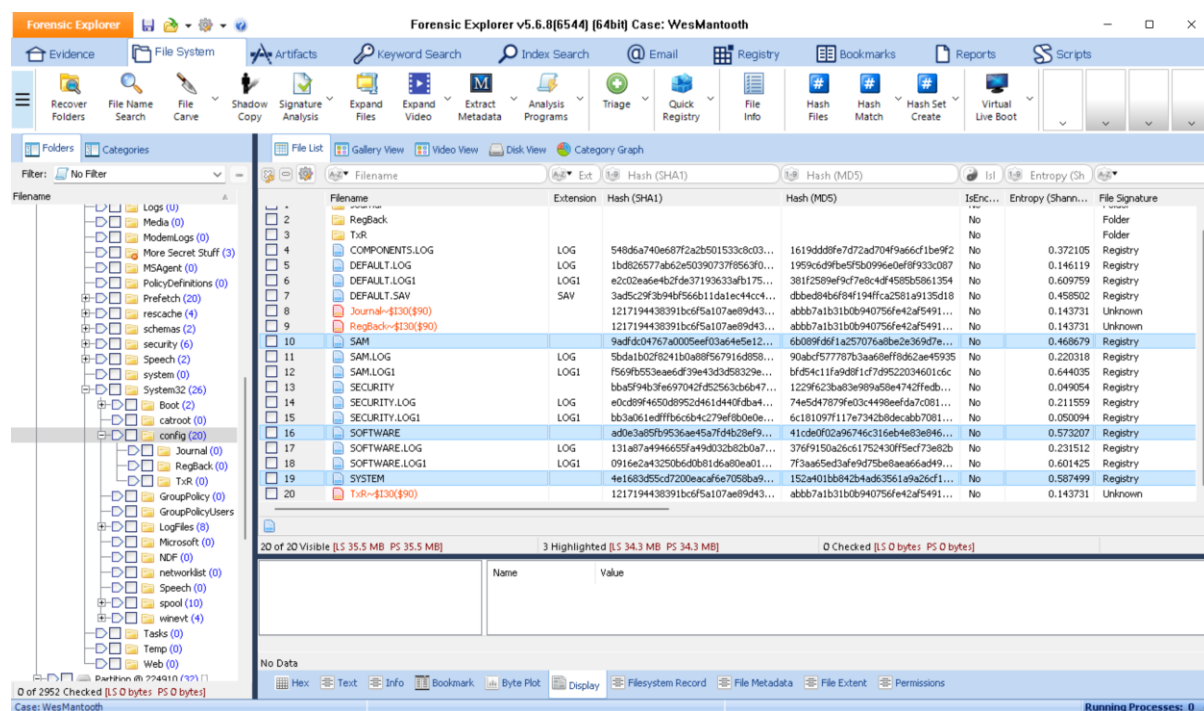

Figure 1.4

Each user has their own unique NTUser.Dat file, so I went to Wes Mantooth's user account and searched for the file there. Figure 1.5 shows the results and the file that I exported to the registry module.

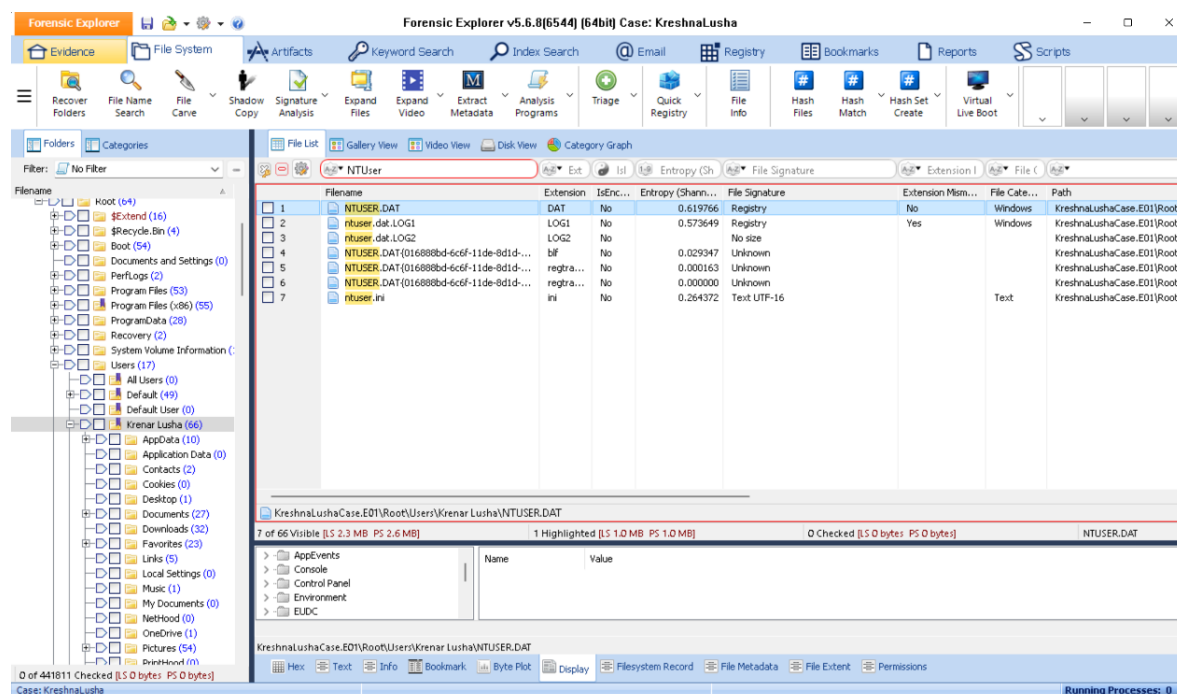

Figure 1.5

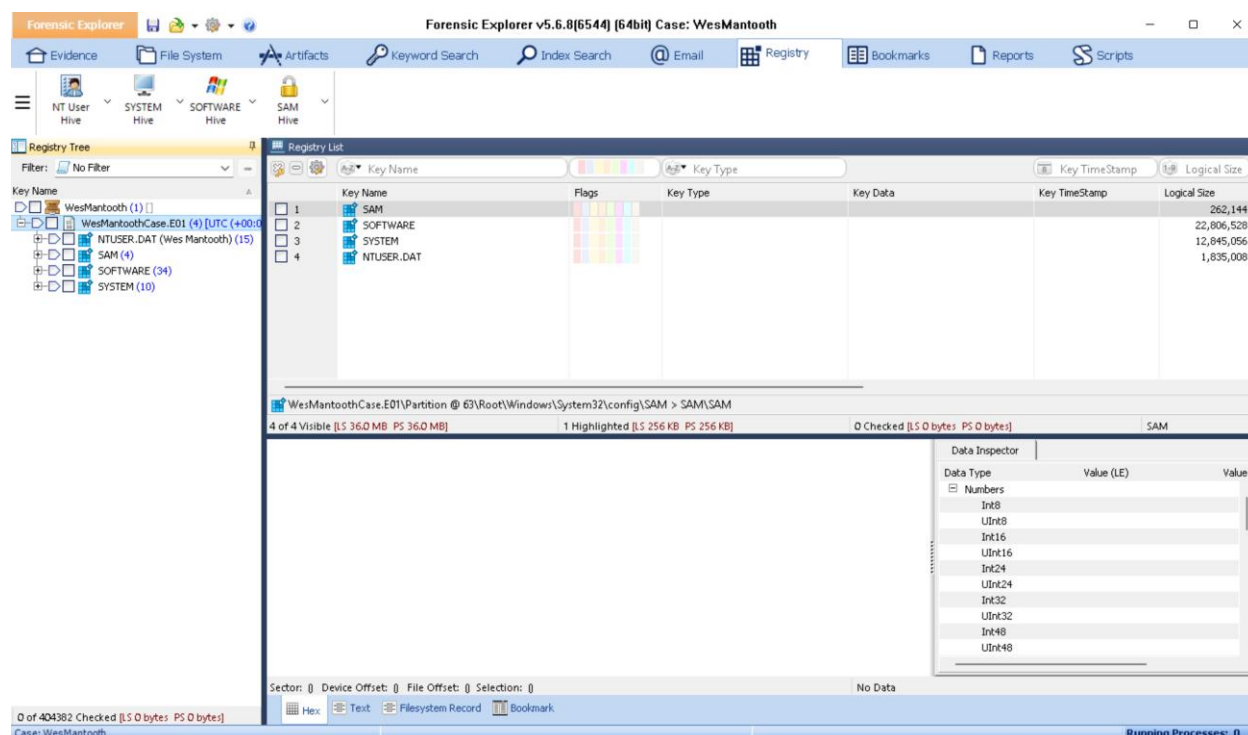

Figure 1.6

SAM.

The first registry hive I went through was the Security Accounts Manager (SAM). The SAM hive contains information on all of the users on the system. Wes Mantooth's laptop had 5 users set up on it. Below are all the users' account information from the SAM parse:

Parse: \SAM\Domains\Account\Users

User Name: Administrator

Full Name:

End of results.

**System.**

The next hive in the registry that I went through is the system hive. This hive contains information on the system such as, the computers name, the networks connected to, the last shutdown, the time zone of the system, and the USB devices that have been connected. Below is the output from these categories.

**Computer name.**

The computer name is the suspects own name, further proving that the laptop does belong to our suspect.

End of results.

Software.

Software is the next registry hive that I went through in the Forensic Explorer. In this hive I will be looking at the email clients, email default, network cards, OS install date, product name and ID, registered user, uninstalled programs, and windows portable devices.

Email Clients.

Search for: SOFTWARE\Clients\Mail

Description: Email clients.

Reference: <http://msdn.microsoft.com/en-us/library/dd203067%28VS.85%29.aspx>

NTuser.Dat

Lastly, I will use the NT User hive to look at Wes Mantooth's recent activity on the laptop, such as Internet Explorer URLs and recent documents.

Recent docs.

Search for: NTUSER\Software\Microsoft\Windows\CurrentVersion\Explorer\RecentDocs

Description: Recent documents as listed in the Windows "My Recent Documents" menu.
Further information about the relative order of the listed files can be extracted from the "MRUListEx" value.

Reference: None.

## Active File Review

### Axiom

The other software that I used to investigate this image was Axiom. Figure 2.0 shows the case details in Axiom for this case. Figure 2.1 shows the evidence sources used to process the case. Figure 2.2 shows that I selected all of the artifacts to display in the case, I did this to better understand the case and examine all of the little details within it.

## SELECT ARTIFACTS TO INCLUDE IN CASE

*Figure 2.3***Web Related.*****Google Searches.***

While I was investigating the forensic image in Axiom, I bookmarked every piece of evidence that I came across. Inside of the google searches I found 17 artifacts that are incriminating or suspicious. Most of these searches are repeated multiple times, figure 2.3 shows the terms that were searched in google. Figures 2.4 - 2.6 show examples of his other search results, these include meth, ATM, and check related searches.

The screenshot displays the Magnet AXIOM v9.6.0.45737 interface. The top menu bar includes File, Tools, Process, and Help. Below the menu is a filter bar with tabs for Evidence, Artifacts, Content types, Date and time, Evidence, and More. The main window is divided into three sections: a left sidebar, a central results pane, and a right details pane.

**Left Sidebar:** Contains a list of categories and their counts: MATCHING RESULTS (400), REFINED RESULTS (34), Google Searches (17), Locally Accessed Files and Folders (2), Parsed Search Queries (1), Rebuilt Webpages (14), WEB RELATED (32), MEDIA (177), EMAIL & CALENDAR (50), DOCUMENTS (7), APPLICATION USAGE (1), OPERATING SYSTEM (87), ENCRYPTION & CREDENTIALS (6), CONNECTED DEVICES (3), and TAGGED FROM FILE SYSTEM (3).

**Central Results Pane:** Titled 'MATCHING RESULTS (17 of 195)'. It shows a table with columns for Search Term and URL. The search term 'tbn:3TZmvF3dKCHNdM:http://www.breadonthewate...' is highlighted.

**Right Details Pane:** Titled 'tbn:3TZmvF3dKCHNdM:http://...'. It shows details for 'WesMantoothCase.E01'. The 'ARTIFACT INFORMATION' section includes Search Term, URL, Date/Time (7/12/2007 11:17:08.471 PM), Artifact type (Google Searches), Item ID (5454), and Original artifact (Internet Explorer Cache Records). The 'EVIDENCE INFORMATION' section includes Source (WesMantoothCase.E01 - Partition 1 (Microsoft NTFS, 109.79 MB)), Recovery method (File Offset 98304), and Evidence number (WesMantoothCase.E01).

Figure 2.4

The screenshot displays the Magnet AXIOM v9.6.0.45737 interface. The top menu bar includes File, Tools, Process, and Help. Below the menu is a filter bar with tabs for Evidence, Artifacts, Content types, Date and time, Evidence, and More. The main window is divided into three sections: a left sidebar, a central results pane, and a right details pane.

**Left Sidebar:** Contains a list of categories and their counts: MATCHING RESULTS (400), REFINED RESULTS (34), Google Searches (17), Locally Accessed Files and Folders (2), Parsed Search Queries (1), Rebuilt Webpages (14), WEB RELATED (32), MEDIA (177), EMAIL & CALENDAR (50), DOCUMENTS (7), APPLICATION USAGE (1), OPERATING SYSTEM (87), ENCRYPTION & CREDENTIALS (6), CONNECTED DEVICES (3), and TAGGED FROM FILE SYSTEM (3).

**Central Results Pane:** Titled 'MATCHING RESULTS (17 of 195)'. It shows a table with columns for Search Term, URL, Date/Time, Date..., Orig..., Sear..., and Pre. The search term 'tbn:-vA0MbJufDoJFM:http://www.fims.uwo.ca/newmedia2006/images/public/9 Meth Assets/MethArticleImages/Methingredients.jpg' is highlighted.

**Right Details Pane:** Titled 'tbn:-vA0MbJufDoJFM:http://www.fims.uwo.ca/newmedia2006/images/public/9 Meth Assets/...'. It shows details for 'WesMantoothCase.E01'. The 'ARTIFACT INFORMATION' section includes Search Term, URL, Date/Time (7/12/2007 11:17:08.462 PM), Artifact type (Google Searches), Item ID (5461), and Original artifact (Internet Explorer Cache Records). The 'EVIDENCE INFORMATION' section includes Source (WesMantoothCase.E01 - Partition 1 (Microsoft NTFS, 109.79 MB)), Recovery method (File Offset 98304), and Evidence number (WesMantoothCase.E01).

Figure 2.5

These are webpages that the users went to, and they have been rebuilt by the Axiom software. These webpages contain information on making meth, counterfeiting checks, and ATM stealing. Figure 2.7 shows the titles of these webpages.

## Internet Explorer.

This is web related artifacts that pertain to the internet explorer. Figure 2.8 shows the cookie records, which indicate that there is encryption on the laptop. Figures 2.9 – 3.0 Show the daily and main history of the internet explorer.

The screenshot displays the Magnet Axiom Examine v9.6.0.45737 interface. The top menu bar includes File, Tools, Process, and Help. Below the menu is a filter bar with tabs for Evidence, Artifacts, Content types, Date and time, Evidence, and More. The main window is divided into three panes. The left pane shows a navigation tree with categories like MATCHING RESULTS (405), REFINED RESULTS (39), WEB RELATED (32), MEDIA (177), EMAIL & CALENDAR (50), DOCUMENTS (7), APPLICATION USAGE (1), OPERATING SYSTEM (87), ENCRYPTION & CREDENTIALS (6), CONNECTED DEVICES (3), and TAGGED FROM FILE SYSTEM (3). The middle pane displays 'MATCHING RESULTS (1 of 52)' with a table showing a single result for 'www.truecrypt.org/' accessed by 'wes mantooth' on '4/11/2007 1:34:50 AM'. The right pane shows the details for 'www.truecrypt.org/' under the heading 'WesMantoothCase.E01'. It includes a 'DETAILS' section with 'ARTIFACT INFORMATION' and 'EVIDENCE INFORMATION'. The artifact information shows the URL 'www.truecrypt.org/', user 'wes mantooth', last accessed date/time '4/11/2007 1:34:50.000 AM', last modified by web server date/time '4/11/2007 1:34:50.000 AM', visit count '4', artifact type 'Internet Explorer Cookie Records', and item ID '4960'. The evidence information shows the source 'WesMantoothCase.E01 - Partition 1 (Microsoft NTFS, 109.79 MB) MANTOOTH \Users\Wes Mantooth\AppData\Roaming\Microsoft\Windows\Cookies\Low\index.dat', recovery method 'Carving', deleted source, location 'File Offset 23808', and evidence number 'WesMantoothCase.E01'.

Figure 3.0

**Media.*****Pictures.***

The laptop contained many pictures, some being random photos, but there were over a hundred pictures indicating signs of illegal activity. The photos contain images of credit cards checks, prescriptions, ATMs being taken apart, drugs and chemical mixtures, a cartoon stating the excuses for using a bad check, and more. Figures 3.1 – 3.5 show the photos that can be considered as evidence. There are some thumb cache pictures, however, these are mostly repeats of the pictures in the previous figures. Figure 3.6 – 3.7 show these pictures.

Within the photos of the laptop I found thousands of images indicating signs of potential terrorism, or evidence of terrorism. The photos contain images of terrorist leaders, political leaders, terrorist organization posters, terrorist activity photos, chemicals to create a bomb, geographic images (some relating to military), political art, and many more artifacts. Figures 3.5 – 5.4.

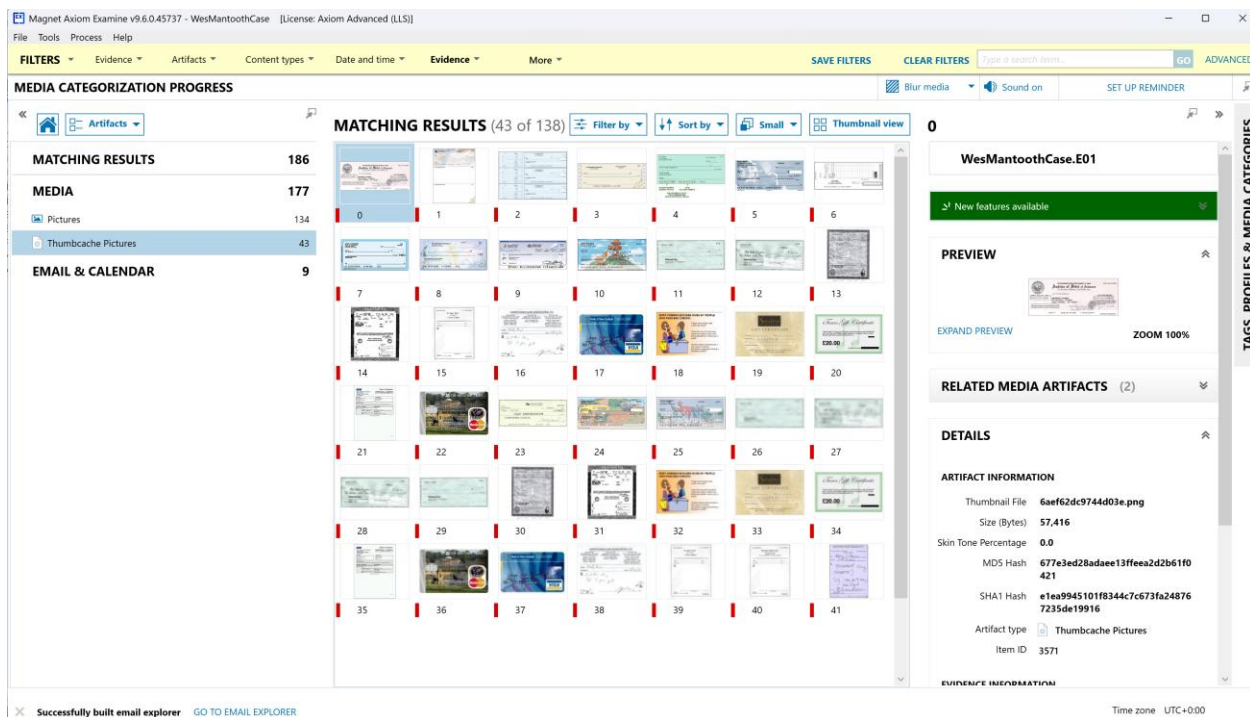

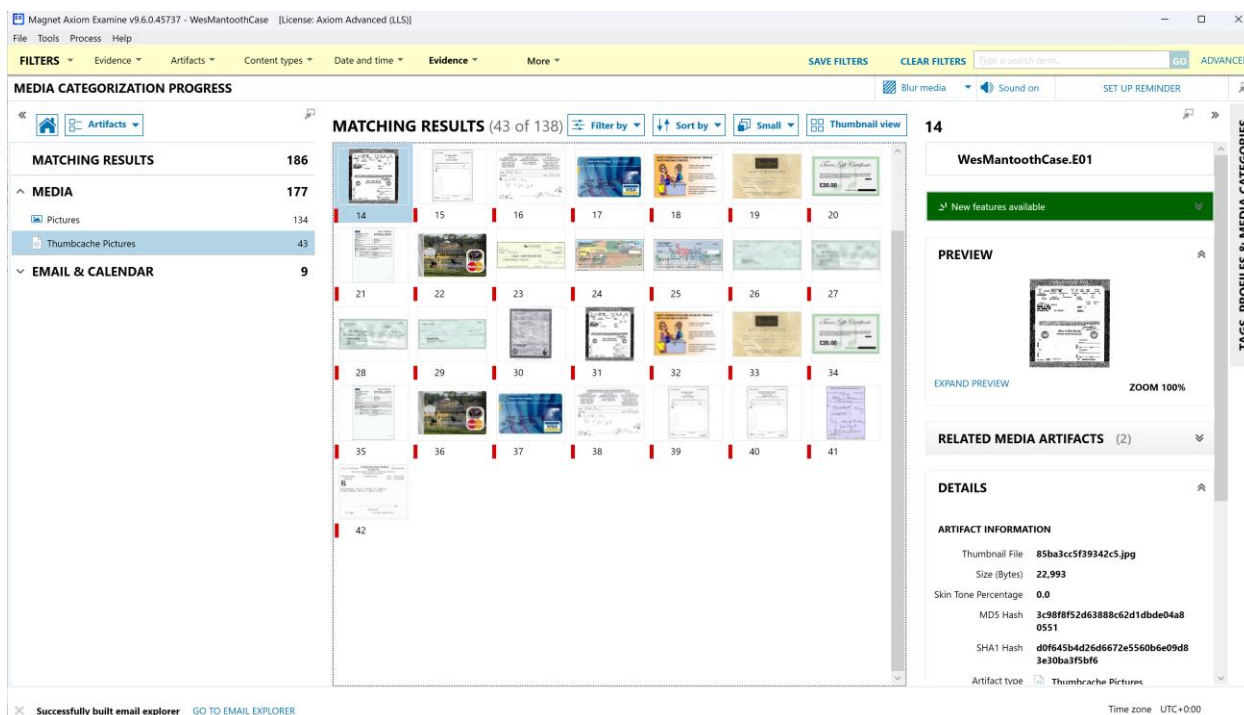

Figure 3.6

*Figure 3.7*

## Email.

Wes Mantooth has multiple emails to different recipients that are incriminating and provide evidence toward our case. These emails contain information on pharmaceutical drugs, ATMs, stealing credit cards, and more. Below are the email attachments, EML(X) Files, outlook emails, notes, tasks, and appointments. Figures 3.8 – 4.6 show the email artifacts.

The screenshot displays the Magnet Axiom Examine v9.6.0.45737 interface for the WesMantoothCase. The left sidebar shows a navigation tree with categories like FILTERS, MATCHING RESULTS (405), REFINED RESULTS (39), and various file types. The 'EMAIL & CALENDAR' section is expanded, showing 'Email Attachments' with 15 items. The main pane displays 'MATCHING RESULTS (15 of 30)' for the selected category. The results table lists files such as Prescription2.gif, doc-prescription.jpg, Confidential Business Letter.doc, atm.bmp, How To Steal Credit Numbers.doc, ATM_THEFTS1.ppt, and News Report.doc, along with their artifact IDs and subjects. The right pane shows a preview of the 'Confidential Business Letter.doc' file, including its content and details like File Name, Subject, File Extension, and File Size (29696 bytes).

Figure 3.8 – Email Attachments

The screenshot displays the Magnet Axiom Examine v9.6.0.45737 interface for the WesMantoothCase, focusing on EML(X) Files. The left sidebar shows the 'EMAIL & CALENDAR' section expanded, with 'EML(X) Files' selected, showing 14 items. The main pane displays 'MATCHING RESULTS (14 of 25)' for this category. The results table lists email messages with columns for To, From, and Date. The right pane shows a preview of an email from 'txkidd@swbell.net' to 'WesMantoothCase.E01', including the email's content and details like From, Sent, To, CC, Subject, and Importance.

Figure 3.9 – EML(X) Files

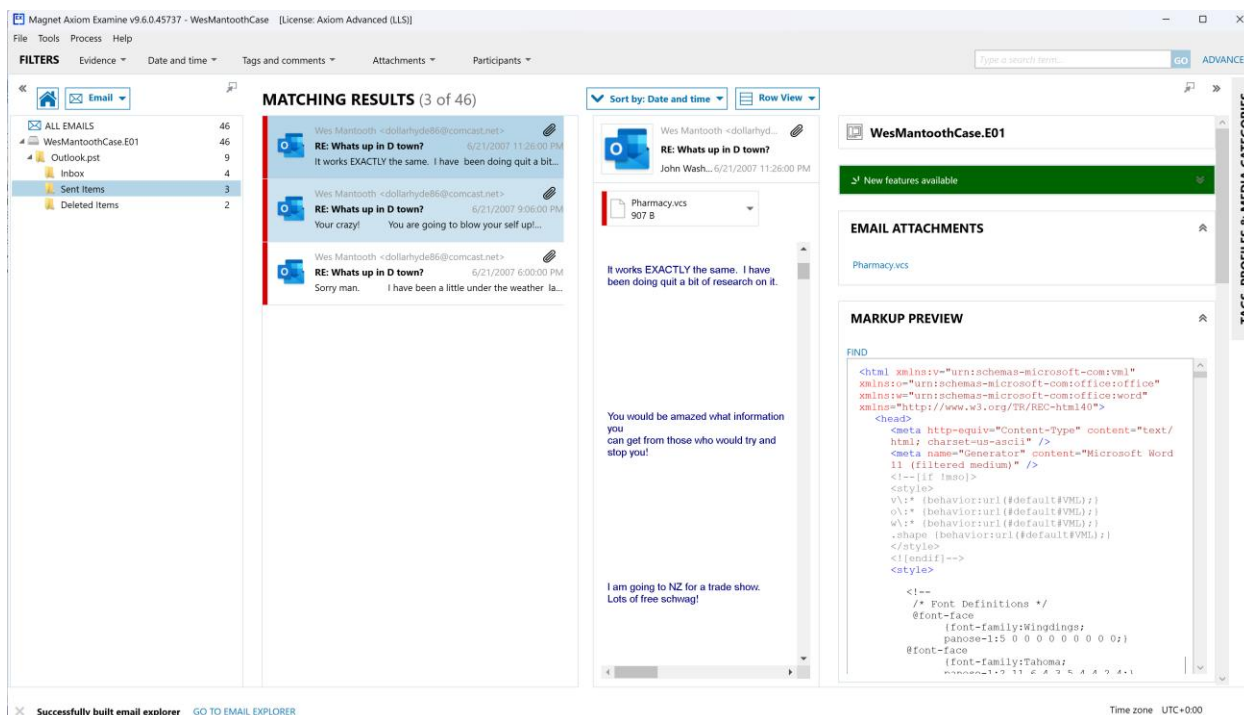

Figure 4.4 –Sent Outlook Mail

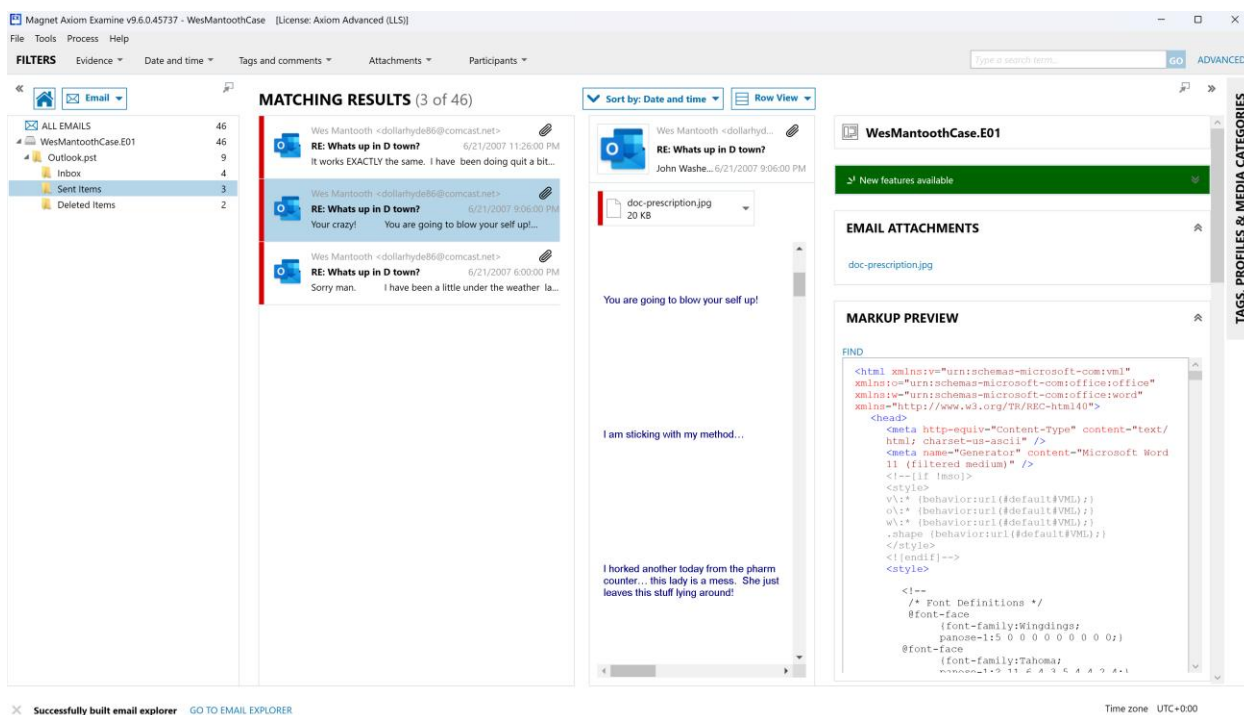

Figure 4.5 –Sent Outlook Mail

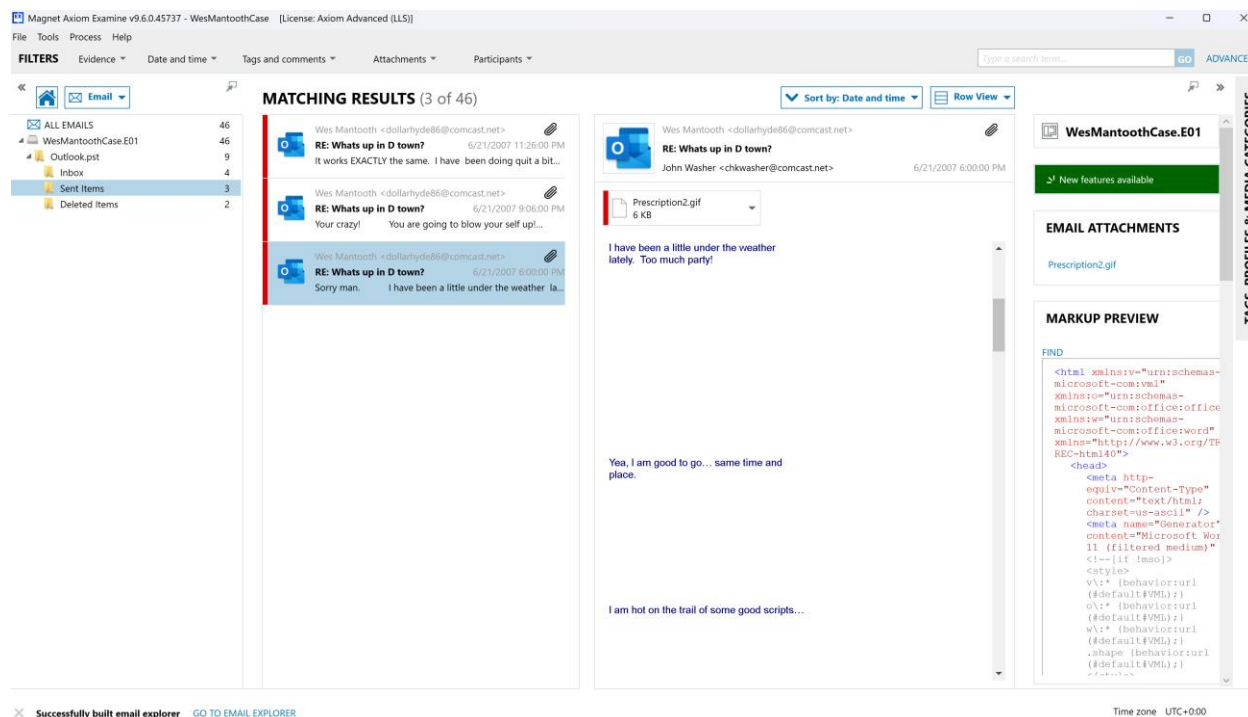

Figure 4.6 –Sent Outlook Mail

## Documents.

Within the documents there are multiple incriminating documents. First being the excel sheet that lists the drug customers and how much they owe, figure 4.7. The excel files above that one are encrypted and could contain more potential evidence. The next figures show the text files, which contain a confession, a document stating how to steal cars, and a document that defines bad checks.

## Microsoft Excel Documents.

The screenshot displays the Magnet Axiom Examine v9.6.0.45737 interface. The top navigation bar includes 'File', 'Tools', 'Process', and 'Help'. Below it, a yellow filter bar contains 'FILTERS', 'Evidence', 'Artifacts', 'Content types', 'Date and time', 'Evidence', and 'More'. The main interface is divided into three sections: a left sidebar, a central 'MATCHING RESULTS' pane, and a right 'DETAILS' pane.

**Left Sidebar:** A list of categories with counts: MATCHING RESULTS (405), REFINED RESULTS (39), WEB RELATED (32), MEDIA (177), EMAIL & CALENDAR (50), DOCUMENTS (7), APPLICATION USAGE (1), OPERATING SYSTEM (87), ENCRYPTION & CREDENTIALS (6), CONNECTED DEVICES (3), and TAGGED FROM FILE SYSTEM (3). The 'DOCUMENTS' category is expanded, showing 'Microsoft Excel Documents' (3) and 'Text Documents' (4).

**Central Pane:** Titled 'MATCHING RESULTS (3 of 3)', it shows a table of search results for '~ar1730.xar'. The table has columns for 'Filename', 'File System Last M...', 'File System Last Ac...', and 'File System'. The results are:

Filename	File System Last M...	File System Last Ac...	File System
Those who owes.xls	7/12/2007 10:58:45.735 PM	9/26/2007 7:57:11.859 PM	7/12/2007 11:02:58.581 PM
Those who owes.xls	7/12/2007 10:58:45.735 PM	9/26/2007 7:57:11.859 PM	7/12/2007 11:02:58.581 PM
~ar1730.xar	7/12/2007 10:56:54.000 PM	7/12/2007 11:02:58.581 PM	7/12/2007 11:02:58.581 PM

**Right Pane:** Titled '~ar1730.xar', it shows a 'PREVIEW' of the Excel document. The preview displays a table with columns 'Dudes Name', 'What', and '\$\$\$'. The data rows are:

Dudes Name	What	\$\$\$
Little Timmy	Mth	\$600.00
Big John	Special K	\$250.00
John Washer	H	\$250.00
Frank the Tank	H	\$5,000.00
Sam I AM	Marijuana	\$100.00
Mac Daddy	Special K	\$200.00
Mr Freeze	Special K	\$698.42
Methalotapus	Mth	\$555.00
megamethamous	Mth	\$250.00
Simple Simon	Marijuana	\$698.00

The 'DETAILS' section shows 'ARTIFACT INFORMATION' for the file '~ar1730.xar', including its filename, last modified date/time (7/12/2007 10:56:54.000 PM), last accessed date/time (7/12/2007 11:02:58.581 PM), created date/time (7/12/2007 11:02:58.581 PM), and size (6,656 bytes).

Figure 4.7

## Text documents.

The screenshot displays the Magnet Axiom Examine v9.6.0.45737 interface. The top navigation bar includes 'File', 'Tools', 'Process', and 'Help'. Below it, a yellow filter bar contains 'FILTERS', 'Evidence', 'Artifacts', 'Content types', 'Date and time', 'Evidence', and 'More'. The main interface is divided into three sections: a left sidebar, a central 'MATCHING RESULTS' pane, and a right 'DETAILS' pane.

**Left Sidebar:** A list of categories with counts: MATCHING RESULTS (405), REFINED RESULTS (39), WEB RELATED (32), MEDIA (177), EMAIL & CALENDAR (50), DOCUMENTS (7), APPLICATION USAGE (1), OPERATING SYSTEM (87), ENCRYPTION & CREDENTIALS (6), CONNECTED DEVICES (3), and TAGGED FROM FILE SYSTEM (3). The 'DOCUMENTS' category is expanded, showing 'Microsoft Excel Documents' (3) and 'Text Documents' (4).

**Central Pane:** Titled 'MATCHING RESULTS (4 of 67)', it shows a table of search results for 'My Confession.txt'. The table has columns for 'Filename', 'Size...', and 'Modified Date/Time'. The results are:

Filename	Size...	Modified Date/Time
readthis.txt	421	7/13/2007 6:59:08.000
readthis.txt:password.txt	73	7/13/2007 6:59:08.000
My Confession.txt	232	8/14/2007 9:26:41.770
How to Steal Cars.txt	4,956	8/15/2007 6:10:46.000

**Right Pane:** Titled 'My Confession.txt', it shows a 'PREVIEW' of the text document. The preview displays the following text:

This is my confession.

I am the scum of the earth. I rob from the rich... and the poor too!

I taketh away... and keepeth!

I did it all... I am guilty

Oh, by the way, I am deleting this so you will never find it!

:)

The 'DETAILS' section shows 'ARTIFACT INFORMATION' for the file 'My Confession.txt', including its filename, size (232 bytes), modified date/time (8/14/2007 9:26:41.770 PM), accessed date/time (2/13/2008 12:53:11.953 AM), and created date/time (2/13/2008 12:53:11.953 AM).

Figure 4.8

The screenshot displays the Magnet Axiom Examine v9.6.0.45737 interface. The top menu bar includes File, Tools, Process, and Help. Below it, a filter bar shows categories like Evidence, Artifacts, Content types, Date and time, and Evidence. The main window is divided into three sections: a left sidebar, a central results pane, and a right preview pane.

**Left Sidebar:** A list of categories and their counts:

FIND

Bad checks, also known as NSF checks, bounced checks, rubber checks, insufficient checks, bogus checks, etc., can be a big problem for an individual or for any size company. There are both civil and criminal penalties for this unlawful act, although it is much more costly and difficult to prove a criminal case. Always consider your goal: to recover the money or punish the check writer?

Civil Penalties by State.

Figure 5.1

### Encryption.

This laptop contained 6 encrypted files, and they seem to be encrypted through TrueCrypt. I was unable to crack the encryption so there could be more potential evidence in those files. I was able to find a password for one of these files, but as I said I was still unable to crack the encrypted files. Figure 5.2 shows these files.

### Conclusion

Throughout this investigation of Wes Mantooth's laptop, I discovered many incriminating pieces of evidence that not only tie him to criminal activities, but also our agencies previous case with John Washer. Firstly, the computer name is under Wes Mantooth's name indicating ownership, as well as him being the registered owner. Additionally, Wes Mantooth's account on the laptop requires a password as well as having the most logins on the system, 96. With this we can properly assume that Wes Mantooth is not only the owner of the laptop, but he also is responsible for the content that is on the laptop as well. While looking at the connected USB devices and windows portable devices we can see that Wes Mantooth has had a lot of external devices connected to the laptop, meaning he could have exported a lot of evidence before our agency collected his laptop. Finding these physical devices could add potentially more evidence to our case. While looking at the NTUser.Dat for Wes Mantooth, we can see that his account accessed all of these documents that I have listed above as "evidence".

When it comes to artifacts, Wes Mantooth searched into google multiple queries that pertain to illegal activities. Wes Mantooth continually searched for results pertaining to meth, ATM stealing, check washing, and if he is searching for bad stuff on google. These search queries happened multiple times across the day on July 12th, 2007. In addition to these searches, Wes Mantooth also searched for these results on Internet Explorer, the same day.

There were hundreds of photos on the laptop and most of them were random, however there were over a hundred photos that pertained to the criminal activities that Wes Mantooth is in question of doing. To explain, the laptop contains multiple pictures of ATM machines and the inter components of them. It also contains fake checks, fake credit cards, and fake doctor prescriptions. These photos indicate that Wes Mantooth is creating and trying to use bad checks, fake credit cards, and fake prescriptions.

Within Wes Mantooth's emails is where we find most of our incriminating evidence. Axiom allows us to rebuild the users' email and view the artifacts in an email view. Doing this we can also see Wes Mantooth's sent, received, and deleted emails. The only emails that he deleted were ones from Outlook, however, the inbox and sent items contain 7 incriminating emails. The first email is from John Washer on June 20th, 2007, which states that John has been laying low but has the "Special K" that Wes is supposedly looking for. Wes responds to this on June 21st, 2007 and says that he has been under the weather from partying, but he sent over a prescription saying it needs a little editing still. The next email is from the same day, John is suggesting that they stop selling prescriptions and sent a link that pertains to "speedy drugs" and how to manufacture them. This is where they get the idea to start selling meth I am guessing. Wes responds and says don't blow yourself up while stating how he stole a prescription pad from a lady at the pharmacy. John then sends another email the same day asking if getting the old writing off of the checks is the same as the prescription pads. Wes responds by saying it's the exact same and he has been researching it. This suggests that the group is reusing prescription pads and checks and passing them off as new ones. The last email is from Rasco, and he is proposing a letter that will supposedly get the group more capital. The letter looks to be like it is requesting an offshore bank in Africa that will transfer their \$4.5 million into an account.

This laptop also contained 7 documents that were incriminating, three excel files and four text files. Two of the excel files were encrypted and could not be cracked, but the other one was a spreadsheet that contained a list of names, what drug they purchased, and how much they still owe. One of the text documents was a document that described a bad check and what the consequences of being caught using one is. Another text document states the 10 best ways to steal a car, this could be a new “business idea” of Wes’s. The last two files are one that contains a password to an encrypted file and Wes’s confession. The My Confession.txt file was created by Wes on February 13th, 2008 and states:

“This is my confession.

I am the scum of the earth. I rob from the rich... and the poor too!

I taketh away... and keepeth!

I did it all... I am guilty

Oh, by the way, I am deleting this so you will never find it!

:)”

Although he does not confess to any actually criminal charges this note should not be taken lightly.

With all of the artifacts that I have located in this investigation, I think it is right to say that Wes Mantooth is connected to criminal activities, and more, with John Washer.

## **Appendix of Terms**

**Forensic Image** – A bit-for-bit copy of a piece of digital evidence.

**Hash Value** – A unique digital footprint that represents the contents of a drive or file.

**Windows Registry** – Store configuration settings for the operating system, applications, and hardware.
